It signifies a commission directed to the judges of assize empowering them to try all questions of fact issuing out of the courts of Westminster, that are then ready for trial by jury, an issue of fact being raised between the parties. The issue is appointed by the entry on the record or written proceedings to be tried by a jury from the county in which the cause of action arises, and as by the course of the courts all causes are heard at Westminster, the following clause is added in such writs, *nisi prius* justiciarii domini regis ad assisas capiendas venerint: that is, unless before the day fixed the justices come thither (that is, to the county in question) to hold the assizes, which they are always sure to do. Whence the writ, as well as the commission, has received the name of *Nisi Prius*. The judges of assize, by virtue of their commission of *nisi prius*, try the causes thus appointed in their several circuits, unless they are dated of London or Middlesex, in which case they are tried in London or in Westminster, at the sittings during or after term. The courts directed to try matters of fact in the several counties are called courts of *Nisi Prius*, or *Nisi Prius* courts.

NI'TRATE, *n.* A salt formed by the union of the nitric acid with a base; as, *nitrate* of soda; *nitrate* of potassa, or potash, &c. The nitrates are all soluble in water, and easily decomposed by heat. They are much employed as oxidizing agents, and may be prepared by the action of nitric acid on metals, on the salifiable bases themselves, or on carbonates.

NI'TRATED, *a.* Combined with nitric acid.

NI'TRATE OF SILVER, *n.* When silver is oxidized and dissolved by nitric acid, diluted with two or three times its weight of water, it forms a solution which yields transparent tabular crystals on cooling, which are called nitrate of silver, or nitrate of oxide of silver. These crystals are fused by being heated to 425°, and the water of crystallization driven off. In this situation, the nitrate, or rather subnitrate, (for the heat drives off part of the acid) is of a black colour, may be cast into small sticks in a mould, and these form the *lapis infernalis*, or *lunar caustic*, employed by surgeons as a cautery. It is sometimes employed for giving a black colour to the hair, and is the basis of the indelible ink for marking linen. The nitrate of oxide of silver constitutes an extremely delicate test of the presence of organic matter. Its solution is always kept in the laboratory as a test for chlorine and hydrochloric acid.

NI'TRATE OF SODA, *n.* A salt analogous in its chemical properties to nitrate of potassa or nitre. It commonly crystallizes in obtuse rhombohedrons. It is found plentifully in Peru, and is imported into England from America. It is used as a manure, and as a source of nitric acid.

NI'TRE, *n.* [Fr. *nitre ;* L. *nitrum ;* Gr. *νιτρον*: Heb. and Syr. נתר, *neter ;* Ar. *nitrona*. In Hebrew, the verb under which this word appears signifies to spring, leap, shake, and to strip or loose; in Ch. to strip or to fall off; in Syriac, the same; in Sam. to keep, to watch, or guard; in Ar. the same; in Eth. to shine.] A salt, called also saltpetre, [stone-salt,] and in the modern nomenclature of chemistry, nitrate of potassa. It is generated spontaneously in the soil, and crystallizes upon its surface in several parts of the world, and especially in the East Indies, whence the greater part of the nitre used in Great Britain is derived. In some parts of the continent it is prepared artificially from a mixture of common mould or porous calcareous earth with animal and vegetable remains containing nitrogen. It is a colourless salt with a saline taste, and crystallizes in six sided prisms. It is chiefly employed in chemistry as an oxidizing agent, and in the formation of nitric acid. Its chief use in the arts is in the making of gunpowder. It also enters into the composition of fluxes, and is extensively employed in metallurgy; it is used in the art of dyeing, and is much employed in the preservation of meat and animal matters in general. In medicine, it is prescribed as cooling, febrifuge, and diuretic. It consists of 54 nitric acid + 48 potassa.

NI'TRIC, *a.* Impregnated with nitric acid. *Nitric acid* is composed of oxygen and nitrogen or azote, in the proportions of five equivalents of the former to one of the latter. It was formerly called *spirit of nitre*, and is prepared by distilling a mixture of sulphuric acid and nitre. It is a substance of great importance and utility in scientific chemistry, and in most chemical arts. It is a most powerfully oxidizing agent, and is decomposed by almost all the metals. When pure it is a colourless liquid, but is usually yellowish, owing to a small admixture of nitrous acid. Its smell is very strong and disagreeable; and it is so acrid that it cannot be safely tasted without being much diluted. It acts with great energy on most combustible substances, simple or compound, and upon most of the metals. It is never met with, nor can it be obtained, in an insulated state. It exists in combination with the bases, potash, soda, lime, magnesia, in both the vegetable and mineral kingdoms. It is employed for etching on copper; as a solvent of tin, to form with that metal a mordant for some of the finest dyes. It is also employed in metallurgy and assaying; also in medicine, in a diluted state, as a tonic, and as a substitute for mercurial preparations, in syphilis and affections of the liver; and also in form of vapour to destroy contagion. For the purposes of the arts, it is diluted with the sulphuric and muriatic acids, and known by the name of *aquafortis*.

NI'TROGEN, *n.* [Gr. νιτρον, nitre, and γεννάω, to produce.] That element which is the basis of nitric acid, and the principal ingredient of atmospheric air. It is an important elementary principle; it constitutes about four-fifths of common air, the rest being principally oxygen. In its pure state it is remarkable for its negative qualities; that is to say, for the difficulty with which it enters into combination with other matters. It is neither combustible, nor a supporter of combustion; it is neither acid nor alkaline; possesses neither taste nor smell. It is most readily obtained from atmospheric air, but it may also be obtained from animal matters. It is fatal to animal life. Exclusive of atmospheric air, there are five known compounds of nitrogen and oxygen, viz., the *protoxide* or *nitrous oxide*, the *deutoxide, hyponitrous acid, nitrous acid,* and *nitric acid.* [*See* AZOTE.]

NITROG'ENOUS, *a.* Pertaining to nitrogen.

NITRO-HEM'ATIC ACID, *n.* [from αἷμα, blood, in allusion to the colour of its salts.] An acid prepared by mixing carbazotic acid with protosulphate of iron. The solutions of its salts are of a blood-red colour.

NITROLEUCIC, *a.* Designating a supposed acid obtained from leucine acted on by nitric acid. It is now supposed to be a compound of nitric acid and leucine, and therefore is not properly an acid.

NITROMECON'IC ACID, *n.* An acid formed by the action of strong nitric acid, aided by a gentle heat, on meconine.

NITROM'ETER, *n.* [Gr. νιτρον and μετρεω, to measure.] An instrument for ascertaining the quality or value of nitre.

NITRO-MURIAT'IC, *a.* The nitro-muriatic acid is a mixture of nitric and muriatic or hydrochloric acid, or more probably a compound of nitrogen, oxygen, and chlorine. It is the *aqua regia* of the alchymists, invented for the purpose of dissolving gold. If colourless aquafortis and ordinary muriatic acid be mixed together, the mixture becomes yellow, and acquires the power of dissolving gold and platinum.

NI'TROUS, *a.* Pertaining to nitre; partaking of the qualities of nitre or resembling it. *Nitrous* acid is one of the compounds formed of nitrogen and oxygen, in which the oxygen is in a lower proportion than that in which the same elements form *nitric* acid. It is always formed when binoxide of nitrogen and oxygen gases are intermixed. It is an anhydrous liquid of an orange colour at 60°, yellow at 32°, and almost colourless at 0°. It is acrid, pungent, and powerfully corrosive. In a stopped bottle it preserves its liquid form at 60°, but when exposed to the atmosphere it is rapidly dissipated in orange-red fumes. It is a powerful oxidizing agent.— *Nitrous gas*, or *nitric oxide*, a gas obtained during the action of nitric acid diluted with about two parts of water upon metallic copper. It consists of equal volumes of nitrogen and oxygen, hence it is termed a binoxide or deutoxide of nitrogen. It is easily recognized by forming orange-coloured fumes whenever it escapes into the air or comes in contact with oxygen, so that this gas and oxygen are excellent tests of each other's presence.

NI'TROUS ETHER, *n.* A compound of alcohol and nitric acid, also termed *hyponitrite of oxide of ethule*, and *hyponitrous ether.*

NI'TROUS OXIDE GAS, *n.* A combination of nitrogen and oxygen, formerly called the *dephlogisticated nitrous gas.* It exists in the form of a permanent gas, has a sweet taste, and a faint agreeable odour. Sir H. Davy showed that it may be taken into the lungs with safety, and that it supports respiration for a few minutes. Its action on the system, when inspired, is very remarkable. A few deep inspirations are followed by most agreeable feelings of excitement, similar to the earlier stages of intoxication, by a strong propensity to laughter (hence it has been termed the *laughing gas*), by a rapid flow of vivid ideas, and an unusual disposition to muscular exertion. These feelings, however, soon subside, and the person returns to his usual state without any feeling of depression or languor. Individuals of different temperament are, however, differently affected by this gas.

NO, *adv.* [Sax. *na* or *ne;* W. *na.*] 1. A word of denial or refusal, expressing a negative, and equivalent to *nay* and *not.* When it expresses a negative answer, it is opposed to *yes* or *yea.* Will you go? *No.* It is frequently used in denying propositions, and opposed to affirmation or concession. "That I may prove them, whether they will walk in my law, or *no;*" Exod. xvi. *No*, in this case, is deemed less elegant than *not*, but the use is very general. —2. After another negative, it repeats the negation with great emphasis.

> There is none righteous, *no*, not one; Rom. iii.; 1 Cor. v.

Sometimes it follows an affirmative proposition in like manner, but still it denies with emphasis and gives force to the following negative.

> To whom we gave place by subjection, *no*, not for an hour; Gal. ii.

Sometimes it begins a sentence with a like emphatical signification, strengthening the following negative.

> *No*, not the bow which so adorns the skies,
> So glorious is, or boasts so many dyes.
> *Waller.*

3. The qualities which constitute distinction of rank in civil society, according to the customs or laws of the country; that eminence or dignity which a man derives from birth or title conferred, and which places him in an order above common men. In *Great Britain*, nobility is extended to five ranks, those of duke, marquis, earl,

viscount, and baron. These titles can only be conferred by the sovereign, and that by patent, in virtue of which they become hereditary. The privileges of the nobility are very considerable; they are all esteemed hereditary counsellors of the crown, and are privileged from all arrests, unless for treason, felony, breach of the peace, condemnation in parliament, and contempt of the sovereign authority. In *Scots law*, a *notary public* is defined to be a public officer, who, upon examination and trial, being admitted by the lords of session, gets power to take instruments in any honest and lawful business, which instruments make faith in law. Notaries in London must have been apprenticed seven years to a notary, and admitted into the civil law courts, before they can be allowed to practise.

NOTA'TION, *n*. [L. *notatio*, from *noto*, to mark.] 1. The act or practice of recording any thing by marks, figures, or characters; particularly in arithmetic and algebra, the expressing of numbers and quantities by figures, signs, or characters appropriate for the purpose. In the common or denary scale of notation employed in arithmetic, every number is expressed by means of the ten digits, 1, 2, 3, 4, 5, 6, 7, 8, 9, 0, by giving each digit a local as well as its proper or natural value. The value of every digit increases in a tenfold proportion from the right towards the left; the distance of any figure from the right indicating the power of 10, and the digit itself the number of those powers intended to be expressed; thus $3464 = 3000 + 400 + 60 + 4 = 3 \times 10^3 + 4 \times 10^2 + 6 \times 10 + 4$. This scale of notation was introduced into Europe by the Arabs about the latter end of the tenth century. The Roman notation, which is still used in marking dates or numbering chapters, consists of seven characters, viz., I. one; V. five; X. ten; L. 50; C. 100; D. or IↃ. 500; M. 1000, sometimes expressed by CIↃ. or CIↃ. In regard to expressing numbers by this notation, it may be observed that, as often as any character is repeated, so many times is its value repeated; a less character before a greater diminishes its value by the less quantity; and a less character after a greater increases its value by the less quantity. In *algebraic notation*, quantities are represented by letters, and their relations pointed out by characters or signs. [*See* SYMBOL.]—2. Meaning; signification; the notice or knowledge of a word which is afforded by its etymology.

Conscience, according to the very *notation* of the word, imports a double knowledge. [*Unusual.*] *South.*

8. In *music*, a character which, by its place on the staff, represents a sound, and by its form, determines the time or continuance of such sound. There are six notes in ordinary use, viz., the semibreve, minim, crotchet, quaver, semiquaver, and demisemiquaver. To these may be added the breve, yet met with in sacred music, and the half demisemiquaver, much used by the moderns. If the value or length in time of the semibreve be considered as unity, the minim is $\frac{1}{2}$, the crotchet $\frac{1}{4}$, the quaver $\frac{1}{8}$, the semiquaver $\frac{1}{16}$, and the demisemiquaver $\frac{1}{32}$. Hence, one semibreve is equal to two minims, or four crotchets, or eight quavers, or sixteen semiquavers, or thirty-two demisemiquavers. The word *note* is frequently used as a synonym of sound; thus we say, a high, low, loud, or soft *note*; or the *note* A; a flat *note*, &c.—9. Tune; voice; harmonious or melodious sounds.

A diplomatic communication in writing; an official paper sent from one minister or envoy to another.

My *note* of January 10th still remains unanswered. *Gallatin.*

16. In *Scots law*, *notes* are written applications, memoranda of proceedings, or notices of motion. In the judicial proceedings of the court of session the most

important notes are *reclaiming notes*, and *notes of pleas in law*. [*See* RECLAIMING NOTE, PLEAS IN LAW.] Besides these there are various incidental applications termed notes. In the inner house such incidental notes are usually presented where a prorogation of the term for lodging a paper, ordered by the court, is required; where it is necessary to have a remit of a depending cause to a new lord ordinary; where circumstances render it necessary to pray the court to retard or expedite the decision in a particular cause, or the like. These notes are usually in MS., and are addressed to the lord president of the division of the court in which the cause depends. They pray his lordship to move the court to the effect required. In the bill-chamber similar notes are presented.—17. *Notes* in *printing* are—*shoulder notes*, which are placed at the top of the page in the outer margin, and contain the book, chapter, or date, or both of them—*side notes*, or marginal notes, and *bottom notes*, or foot notes, at the bottom of the page.

NŌ'TICE, *n.* [Fr. from L. *notitia*, from *noto* or *notus.*] 1. Observation by the eye or by the other senses. We take *notice* of objects passing or standing before us; we take *notice* of the words of a speaker; we take *notice* of a peculiar taste of food, or of the smell of an orange, and of our peculiar sensations. Notice then is the act by which we have knowledge of something within the reach of the senses, or the effect of an impression on some of the senses.—2. Observation by the mind or intellectual power; as, to take *notice* of a distinction between truth and veracity.—3. Information; intelligence by whatever means communicated; knowledge given or received; as, I received *notice* by a messenger or by letter. He gave *notice* of his arrival. The bell gives *notice* of the hour of the day. The merchant gives *notice* that a bill of exchange is not accepted.—*Notice*, in *English law*, is an ambiguous term and has different meanings, as we contemplate the giver, or the receiver of what is called *notice*.—*To give notice*, is to communicate something to another person; the person who receives the communication is said to *have notice*, and when it is proved that he has had such notice he is presumed to have knowledge of the thing communicated. The term *notice* is most commonly applied to buying and selling of land, or some interest in land.—*Notice* has been divided by writers on English law into *actual* and *constructive*. Actual notice, it is said, requires no definition; and constructive notice, in its nature, is no more than evidence of notice, the presumptions of which are so violent that the court will not allow of its being controverted.—4. A paper that communicates information.—5. Attention; respectful treatment; civility.—6. Remark; observation.

NO'TION, *n.* [Fr. from L. *notio*, from *notus*, known; *nosco*, to know.] 1. Conception; mental apprehension of whatever may be known or imagined. We may have a just *notion* of power, or false *notions* respecting spirit.—*Notion* and *idea* are primarily different; *idea* being the conception of something visible, as the *idea* of a square or a triangle; and *notion* the conception of things invisible or intellectual, as the *notion* we have of spirits. But from negligence in the use of *idea*, the two words are constantly confounded.

What hath been generally agreed on, I content myself to assume under the *notion* of principles. *Newton.*

Few agree in their *notions* about these words. *Cheyne.*

That *notion* of hunger, cold, sound, colour, thought, wish, or fear, which is in the mind, is called the *idea* of hunger, cold, &c. *Watts.*

2. Sentiment; opinion; as, the extravagant *notions* they entertain of themselves.—3.† Sense; understanding; intellectual power.—4. Inclination; *in vulgar use*; as, I have a *notion* to do this or that.

NOTO'RIOUS, *a.* [It. and Sp. *notorio*: Fr. *notoire*; from Low L. *notorius*, from *notus*, known.] 1. Publicly known; manifest to the world; evident; usually, known to disadvantage; hence almost always used in an ill sense; as, a *notorious* thief; a *notorious* crime or vice; a man *notorious* for lewdness or gaming.—2. NOTWITHSTAND'ING, the participle of *withstand*, with *not* prefixed, and signifying not opposing; nevertheless. It retains in all cases its participial signification. For example, "I will surely rend the kingdom from thee, and will give it to thy servant; *notwithstanding*, in thy days I will not do it, for David thy father's sake;" 1 Kings xi. In this passage there is an ellipsis of *that*, after *notwithstanding*. *That* refers to the former part of the sentence, *I will rend the kingdom from thee*; notwithstanding *that* (declaration or determination,) in thy days I will not do it. In this and in all cases, *notwithstanding*, either with or without *that* or *this*, constitutes the case absolute or independent. "It is a rainy day, but *notwithstanding that*, the troops must be reviewed;" that is, the rainy day not opposing or preventing. *That*, in this case, is a substitute for the whole first clause of the sentence. It is to that clause what a relative is to an antecedent noun, and *which* may be used in the place of it; *notwithstanding which*, that is, the rainy day.—"Christ enjoined on his followers not to publish the cures he wrought; but *notwithstanding his injunctions*, they proclaimed them." Here, *notwithstanding his injunctions*, is the case independent or absolute; the injunctions of Christ not opposing or preventing This word answers precisely to the Latin *non obstante*, and both are used with nouns, or with substitutes for nouns, for sentences or for clauses of sentences. So in the Latin phrase, *hoc non obstante*, *hoc* may refer to a single word, to a sentence or to a series of sentences.

NOURISH, *v. t.* (nu'rish.) [Fr. *nourrir*; It. *nutrire*; from L. *nutrio*. NUM'BER, *n.* [Fr. *nombre*; L. *numerus*; Arm. and W. *niver*; Ir. *nuimhir*. Probably the radical sense is to speak, name, or tell, as our word *tell*, in the other dialects, is to number. *Number* may be allied to *name*, as the Spaniards use *nombre* for name, and the French word written with the same letters, is *number*.] 1. The designation of a unit in reference to other units, or in reckoning, counting, enumerating; as, one is the first *number*; a simple *number*.—2. An assemblage of two or more units. Two is a *number* composed of one and one added. Five and three added make the *number* eight. *Number* may be applied to any collection or multitude of units or individuals, and therefore is indefinite, unless defined by other words or by figures or signs of definite signification. Hence, —3. More than one; many.

> Ladies are always of great use to the party they espouse, and never fail to win over *numbers*. *Addison.*

4. Multitude.

> *Number* itself importeth not much in armies, where the men are of weak courage. *Bacon.*

5. In *poetry*, measure; the order and quantity of syllables constituting feet, which render verse musical to the ear. The harmony of verse consists in the proper distribution of the long and short syllables, with suitable pauses. In *oratory*, a judicious disposition of words, syllables, and cadences constitutes a kind of measure resembling poetic *numbers*.—6. Poetry; verse; song; harmony.

> I lisped in *numbers*, for the *numbers* came. *Pope.*

Here the first word *numbers* may be taken for *poetry* or *verse*, and the second for *measure*.

> Yet should the Muses bid my *numbers* roll. *Pope.*

7. In *gram.*, the difference of termination or form of a word, to express unity or plurality. The termination which denotes one or an individual, is the singular *number*; the termination that denotes two or more individuals or units, constitutes the plural *number*. Hence we say, a noun, an adjective, a pronoun or a verb is in the *singular* or the *plural* number.—8. In *math.*, number is variously distinguished. *Cardinal numbers* are those which express the amount of units; as 1, 2, 3, 4, 5, 6, 7, 8, 9, 10. *Ordinal numbers* are those which express order; as first, second, third, fourth, &c. *Numbers* are farther distinguished into absolute, abstract, abundant, applicate, artificial, broken, circular, concrete, defective, even, fractional, figurate, odd, similar, &c. Among phrenologists, *number* is reckoned among the perceptive faculties. Its organ is situated a little to one side of the outer angle of the eye, and its function is to give a talent for calculation in general.—*Determinate number* is that referred to a given unit, as a ternary or three; an *indeterminate number* is referred to unity in general, and called quantity.—*Homogeneal numbers* are those referred to the same units; those

referred to different units are termed *heterogeneal*. — *Whole numbers* are called *integers*.—A *rational number* is one commensurable with unity. A number incommensurable with unity is termed *irrational* or *surd*.—A *prime* or *primitive number* is divisible only by unity; as, three, five, seven, &c.—A *perfect number* is that whose aliquot parts added together make the whole number, as 28, whose aliquot parts, 14, 7, 4, 2, 1, make the number 28.—An *imperfect number* is that whose aliquot parts added together make more or less than the number. This is abundant or defective; abundant, as 12, whose aliquot parts, 6, 4, 3, 2, 1, make 16; or defective, as 16, whose aliquot parts, 8, 4, 2, 1, make 15 only.—A *square number* is the product of a number multiplied by itself; as, 16 is the square number of 4.—A *cubic number* is the product of a square number by its root; as, 27 is the product of the square number 9 by its root 3.—*Golden number*, the cycle of the moon, or revolution of 19 years, in which time the conjunctions, oppositions, and other aspects of the moon are nearly the same as they were on the same days of the month 19 years before.—*Theory of numbers*, the investigation and demonstration of certain theorems relating to the properties of numbers. It forms one of the most subtle parts of the algebraic analysis, and its most general problem is: Given any equation whatsoever involving two or more unknown quantities, or any number of equations between a greater number of unknown quantities, to determine every possible solution in which the values of the unknown letters are whole numbers.

NUM'BER, *v. t* [L. *numero*.] 1. To count; to reckon; to ascertain the units of any sum, collection, or multitude.

NUME'NIUS, *n*. Cuvier's name for the Curlews, separated by him from the Scolopax of Linn., and formed into a distinct genus. They belong to the longirostral family; they have a beak arcuated like that of the ibis, but it is more slender and round throughout; the tip of the upper mandible extends beyond the end of the lower one, and projects a little downwards in front of it. The toes are palmated at the base. [*See* CURLEW.]

NU'MERABLE, *a*. [L. *numerabilis*.] That may be numbered or counted.

NU'MERAL, *a*. [Fr.; L. *numeralis*.] 1. Pertaining to number; consisting of number.

> The dependence of a long train of *numeral* progressions. *Locke.*

2. Expressing number; representing number; standing as a substitute for figures; as, *numeral* letters; as X for 10; L for fifty; C for 100; D for 500; M for 1000.—3. Expressing numbers; as, *numeral* characters. The figures we now use to express numbers are 1, 2, 3, 4, 5, 6, 7, 8, 9, 0. They are said to be of Arabian origin; but the Arabians might have received them from India. This is a controverted question.

NU'MERALLY, *adv*. According to number; in number.

> *Numeration* is but still the adding of one unit more, and giving to the whole a new name or sign. *Locke.*

2. In *arith*., notation; the art of expressing in characters any number proposed in words, or of expressing in words any number proposed in characters; the act or art of writing or reading numbers. Thus we write 1000, for thousand, and 50, we read fifty. The denary scale of notation, in common use, consists of units, tens, hundreds, thousands, tens of thousands, hundreds of thousands, millions; after which come billions, trillions, quadrillions, quintillions, sextillions, septillions, octillions, nonillions, &c. But the terms billion, trillion, &c., though defined by writers in arithmetic, have never found their way into common use, the want of such large numbers having never been experienced. Hence, for all common purposes, the denominations higher than a million may be abandoned, it being remembered that all the figures on the left, after six are taken off on the right, are so many millions, and all above twelve figures so many millions of millions. [*See* NOTATION.]

NU'MERATOR, *n*. [L.] One that numbers.—2. In *arith*., the number in vulgar fractions which shows how many parts of a unit are taken. Thus when a unit is divided into 9 parts, and we take 5, we express it thus, $\frac{5}{9}$, that is, five-ninths; 5 being the *numerator*, and 9 the denominator.

NUMER'IC, NUMER'ICAL, } *a*. [It. *numerico*; Fr. *numérique*; from L. *numerus*, number.] 1. Belonging to number; denoting number; consisting in numbers; as, *numerical* algebra; *numerical* characters.—2. *Numerical* difference is that by which one individual is distinguished from another. The same *numerical* body is identically the same. In *alge*., *numerical*, as opposed to *literal* applies to an expression in which the co-efficients of a letter are all numbers and not letters. As opposed to *algebraical*, it applies to the magnitude of a quantity, considered independently of its sign. Thus —10 is said to be numerically greater than —5, though it is algebraically less.

NUMER'ICALLY, *adv*. In numbers; as, parts of a thing *numerically* expressed.—2. With respect to number or sameness in number; as, a thing is *numerically* the same, or *numerically* different.

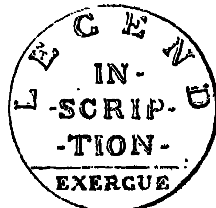
Consisting of poetic numbers; melodious; musical. In *prose*, a style becomes *numerous* by the alternate disposition or intermixture of long and short syllables, or of long and short words; or by a judicious selection and disposition of smooth flowing words, and by closing the periods with important or well-sounding words.



NU'MEROUSLY, *adv*. In or with great numbers; as, a meeting *numerously* attended.

NUMISMAT'ICS, *n*. The science of coins and medals, principally those struck by the ancient Greeks and Romans. The word *coin* is in modern times applied to those pieces of metal struck for the purpose of circulation as money; while the word *medal* signifies pieces of metal similar to coins not intended for circulation as money, but struck and distributed in commemoration of some person or event. Ancient coins, however, are often termed in common language *medals*. The parts of a coin or medal are, the *obverse* or *face*, containing generally the head, bust, or figure of the sovereign or person in whose honour the medal was struck, or some emblematic figure relating to him; and the *reverse*, containing various figures or words.

The words around the border form the *legend*, those in the middle or field the *inscription*. The lower part of the

coin, separated by a line from the figures or the inscription; is the *basis* or *exergue*, and contains the date, the place where the coin was struck, &c. The metals of which coins and medals have been chiefly composed are gold, silver, brass, or copper. Of ancient coins and medals those of the Greeks and Romans are most deserving our attention. The study of coins and medals is indispensable to archæology, and to a thorough acquaintance with the fine arts. They indicate the names of countries and cities, determine their position, and present pictures of many celebrated places. They fix the period of events, and enable us to trace series of kings. In short, they serve to make us acquainted with whatever relates to ancient usages, civil, military, and religious, while they enable us to trace the epochs of different styles of art, and are of great assistance in our philological researches.

NUM'MULITE, *n.* [L. *nummus*, money, from its resemblance to coin.] A fossil extinct genus of multilocular cephalopods, presenting externally a lenticular figure, without any apparent opening, and internally a spiral cavity, divided by septa into numerous chambers, communicating with each other by means of small foramina. They have obtained their name from their supposed resemblance to pieces of money. They vary in size from less than an eighth of an inch, to an inch and a half in diameter. Nummulites occupy an important place in the history of fossil shells, on account of the prodigious extent to which they are accumulated in the later members of the secondary, and in many of the tertiary strata. They are often piled on each other nearly in as close contact as the grains in a heap of corn. They occur so abundantly in some parts of the chalk formation that the name of *nummulite* limestone is given to the strata so characterized. The pyramids of Egypt are constructed of stone composed of nummulites.

The nuncio is generally a prelate of the court of Rome; if a cardinal, he is styled legate. In other catholic kingdoms and states holding themselves independent of the court of Rome in matters of discipline, the nuncio has merely a diplomatic character like the minister of any other foreign power.—2. A messenger; one who brings intelligence.

If it exceed that sum it will be effectual to that extent, if the legatee choose so to restrict it, but ineffectual as to the rest. NUT, *n.* [Sax. *hnut;* D. *noot;* G. *nuss;* Ir. *cnudh;* W. *cnu, cnau.* It seems to be allied to *knot*, a bunch or hard lump.] 1. The fruit of certain trees and shrubs, especially of the different species of coryli or hazels, consisting of a hard shell inclosing a kernel. The kernels of hazel nuts have a mild farinaceous taste, and an expressed oil is obtained from them little inferior to almond oil. Various kinds of *nuts* are distinguished; as, *walnut, chestnut, hazelnut, butternut.* [*See* NUX.]—2. In *mech.*, a small cylinder or other body, with teeth or projections corresponding with the teeth or grooves of a wheel.—3. The projection near the eye of an anchor.—4. A short internal screw which acts in the thread of an external screw. It is used for a great variety of purposes, but it is most commonly put upon the end of a screw-bolt to fasten any thing that may come between it and the head of the bolt. In this way beams of wood or metal are generally joined together, and held by compression, the bolt between the head and the nut being a tie. [*See* SCREW.]

NUT, *v. t.* To gather nuts.

NU'TANT, *a.* [L. *nutans.*] In *bot.*, drooping or nodding; applied to stems, &c. when bent towards the end near the flower, as in the narcissus, Scilla nutans, &c.

NUTA'TION, *n.* [L. *nutatio*, a nodding, from *nuto*, to nod.] In *astr.*, a small subordinate gyratory movement of the earth's axis, in virtue of which, if it subsisted alone, the pole would describe among the stars, in a period of about nineteen years, a minute ellipsis having its longer axis directed towards the pole of the ecliptic, and the shorter, of course, at right angles to it. The consequence of this real motion of the pole is an apparent approach and recess of all the stars in the heavens to the pole in the same period; and the same cause will give rise to a small alternate advance and recess of the equinoctial points, by which, in the same period, both the longitudes and right ascensions of the stars will be also alternately increased or diminished. This nutation, however, is combined with another motion, viz., the precession of the equinoxes, and in virtue of the two motions the path which the pole describes is neither an ellipsis nor a circle, but a gently undulated ring. Both these motions and their combined effect arise from the same physical cause, viz., the action of the sun and moon upon the earth. [*See* PRECESSION.]

NUT-BREAKER. *See* NUT-CRACKER.

NUT'-BROWN, *a.* Brown as a nut long kept and dried.

NUT'-CRACKER, *n.* An instrument for cracking nuts.—2. The name of an insessorial bird rarely seen in Britain. It is generally referred to the crow family, and so placed as to approximate either to the woodpeckers or starlings. There are two species, *Nucifraga caryocatactes*, or European nut-cracker, and *N. hemispila*, found in the Himalaya mountains. The first is about the size of the jackdaw, but with a longer tail. It combines to a considerable extent the habits of the woodpeckers, and those of the other omnivorous birds. It has received the name of nut-cracker from its feeding upon nuts.

NUT'GALL, *n.* An excrescence of the oak. [*See* GALL.]

NUT'-HATCH, *n.* The common name of birds of the genus Sitta. The common European nut-hatch, *S. Europæa*, is called also *nut-jobber* and *nut-pecker*. It is a scansorial bird, of shy and solitary habits, frequenting woods and feeding

on insects chiefly. It also eats the kernel of the hazel-nut, breaking the shell with great dexterity. The female lays her eggs in holes of trees, and hisses like a snake when disturbed.

NUT'-HOOK, *n.* A pole with a hook at the end to pull down boughs for gathering the nuts; also, the name given to a thief that stole goods from a window by means of a hook.

NUT'MEG, *n.* [L. *nux moschata;* Fr. *muscade* or *noix muscade.* But it may be questioned whether the last syllable in English *meg* is not from L. *macis*, mace, the bark that envelops the nut.] The kernel of the fruit of the Myristica moschata. [*See* MYRISTICA.] This fruit is nearly a spherical drupe of the size, and somewhat of the shape of a pear. The fleshy part is of a yellowish colour without, almost white within, and four or five lines in thickness, and opens into two nearly equal longitudinal valves, presenting to view the nut

Nutmeg (Myristica moschata).

surrounded by its arillus, which is mace. The nut drops out, and the arillus withers. The nut is oval, the shell very hard and dark-brown. This immediately envelops the kernel, which is the *nutmeg* as commonly sold in the shops. The tree producing this fruit grows principally in the islands of Banda, in the East Indies. It reaches the height of twenty or thirty feet, producing numerous branches. The colour of the bark of the trunk is a reddish brown; that of the young branches a bright green. The *nutmeg* is an aromatic, very grateful to the taste and smell, and much used in cookery.

NUTRIMENT'AL, *a.* Having the qualities of food; alimental.

NUTRI''TION, *n.* [L. *nutritio*, from *nutrio*, to nourish.] 1. The act or process of promoting the growth or repairing the waste of animal bodies; the act or process of promoting growth in vegetables. In the *animal economy*, nutrition is the last step of the general process of assimilation, by which living bodies convert the materials which they derive from their food into substances like their own, and appropriate the materials thus changed to their own increase or repair. The motion of the parts of the body, the friction of these parts with each other, and especially the action of the air, would destroy the body entirely, if the loss was not repaired by a proper diet containing nutritive juices. These being received into the stomach are variously altered by digestion, absorption, respiration, and by all the other changes which the blood or other fluid undergoes in its passage to the several parts of the frame; these changes constitute the process of assimilation, at the end of which each part of the body abstracts from the general and homogeneous mass of nutritive fluid that which is required for its own growth or repair; muscle abstracting particles to form muscle, nerves from the same fluid abstracting particles to form nerve, and so on. [*See* FOOD.] In regard to plants the nutritious matters are held in solution by water or in the form of gas or air. The root by which plants receive their nutritious juices consists of a vast number of absorbent cells, which being dispersed through the interstices of the earth, attract or imbibe its juices; consequently, every thing in the earth which is dissolvable in water is liable to be imbibed. The motion of these nutritive juices is effected chiefly by endosmosis. Having entered by the roots, they mingle with the sap already in the stem of the plant. This sap mounts upwards by the vessels near the central parts of the woody fibre surrounding the pith; having traversed the trunk it then enters the branches, and at last reaches the leaves; here it combines with air absorbed from the atmosphere through the pores of the leaves. It here also gives off superfluous water, and altogether becomes a

different fluid from what it was in its ascent. It now constitutes the proper juice or nutritious fluid of the plant, and again descends from the leaves through a series of simple tubes in the bark, and then is deposited so as to form new wood, bark, and other parts of the plant. [For an account of the different substances which supply nutritive matter to plants,—*see* FOOD.]—2. That which nourishes; nutriment.

NYMPH, *n.* [L. *nympha*; Gr. νυμφη.] 1. In *myth.*, a goddess of the mountains, forests, meadows, and waters. According to the ancients, all the world was full of nymphs, some terrestrial, others celestial; and these had names assigned to them according to their place of residence, or the parts of the world over which they were supposed to preside. Those who presided over rivers, brooks, and springs were called *Naiades;* those over mountains, *Oreiades;* those over woods and trees, *Dryades* and *Hamadryades;* those over the sea, *Nereides:* those over valleys, *Napææ*, &c. countries they grow. The species are most prized for the beauty of their flowers; as the Nymphæa alba [*see* NYMPHÆA], the Nuphar luteum [*see* NUPHAR], and the Victoria regia of Demerara, the flowers of which measure as much as four feet in circumference. Some of the leaves of Victoria are six feet long.

NYSTAG′MUS, *n.* [Gr. νυσταγμος.] In *med.*, a winking of the eyes such as happens when a person is very sleepy.

O, IS the fifteenth letter, and the fourth vowel in the English Alphabet. The shape of this letter seems to have been taken from the circular configuration of the lips in uttering the sound. It corresponds in figure with the Coptic O, and nearly with the Syriac initial and final *vau*, and the Ethiopic *ain*. In words derived from the Oriental languages, it often represents the *vau* of those languages, and sometimes the *ain;* the original sound of the latter being formed deep in the throat, and with a greater aperture of the mouth. In English, O has a long sound, as in *tone, hone, groan, clohe, roll, droll;* a short sound, as in *lot, plod, rod, song, lodge*, and the sound of *oo*, or the Italian *u*, and French *ou*, as in *move, prove.* This sound is shortened in words ending in a close articulation, as in *book, foot.* The long sound of O is usually denoted by *e*, at the end of a word or syllable, as in *bone, lonely;* or by a servile *a*, as in *moan, foal.* It is generally long before *ll*, as in *roll:* but it is short in *doll, loll*, and in words of more syllables than one, as in *folly, volley* As a numeral, O was sometimes used by the ancients for 11, and with a dash over it, Ō, for 11,000. Among the Irish, O prefixed to proper names signifies *son of;* as, O'Neil, the *son of* Neil, like the Gaelic prefix *mac;* or it is a character of dignity. Among the ancients, O was a mark of triple time, from the notion that the ternary, or number 3, is the most perfect of numbers, and properly expressed by a circle, the most perfect figure. O is often used as an interjection or exclamation to express a wish, admiration, warning, pity, imploring, and sometimes surprise; but when language expressive of strong emotion is used the introductory exclamation is properly Oh! [*See* OH.] Shakspeare uses O for a circle or oval.

Within this wooden *O*.

ŌAK, *n.* [Sax. *ac, æc;* G. *eiche* or *eichbaum;* Dan. *eege-træe*, oak-tree. It is probable that the first syllable, *oak*, was originally an adjective expressing some quality, as hard or strong, and by the disuse of *tree, oak* became the name of the tree.] The English name of Quercus, a genus of plants of the class Monœcia, order polyandria, Linn.; nat. order Cupuliferæ or Corylaceæ. The oak from the remotest antiquity has obtained a pre-éminence among trees, and has not unjustly been styled the "monarch of the woods." Its great size, noble aspect, long duration, and the strength and durability of its wood, all contribute to enhance its importance. It was held sacred by the Greeks and Romans, and no less so by the ancient Gauls and Britons. Of the oak there are a great many species. Two are indigenous to Britain, *Q. robur* or *pedunculata* or common British oak, and *Q. sessiflora* or sessile-fruited bay oak. A considerable number of species and many varieties are found in the temperate parts of Europe, and at least fifty species have been discovered in North and South America. Some of these are deciduous, others evergreen; some only attain the height of shrubs, while others rise to magnificent trees. But the common British oak (*Quercus robur*) claims precedence of every other. The oak timber imported from America is very inferior to that of England; the oak from the central parts of Europe is also inferior, especially in compactness and resistance of cleavage. The knotty oak of England when cut down at a proper age (from fifty to seventy years) is the best timber known, for at once supporting a weight, resisting a strain, and not splintering by a cannon shot; hence its value in ship-building. The common oak attains a height of from 60 to 100 feet, with a trunk from 6 to 12 feet or more in circumference. The bark of the oak tree is very valuable, and is preferred to all other substances for the purpose of tanning. Gallic acid exists abundantly in the oak. The leaves of *Q. falcata* are employed, on account of their astringency, externally in cases of gangrene; and the same astringent principle which pervades all the species has caused them to be employed as febrifuges, tonics, and stomachics. Cork is the bark of *Q. suber.* The galls that writing ink is prepared from are the produce of *Q. infectoria.* These galls are occasioned by an insect, the *cynips gallæ tinctoriæ.* The acorns of a species, *Q. ægilops*, which grows in the Levant, are imported for the use of tanners.

ŌAKY, *a.* [from *oak.*] Hard; firm; strong.

ŌAR, *n.* [Sax. *ar;* Sw. *ara;* Norm. *ower.*] A long piece of timber, flat at one end and round at the other, used to propel a boat, barge, or galley through the water. The flat part, which is dipped into the water, is called the *blade;* the other end is the *loom*, which terminates in the *handle.* The *fulcrum* is the hole in the gunwale, called the *rowlock*, or it is between two pins called *thole pins*, or it is one thole pin with a loose strap for confining the oar. To push the boat or vessel forward by means of this instrument, the rower turns his back forwards, and, dipping the blade of the oar in the water, pulls the handle forward, and this action, combined with the reaction of the water on the blade, serves to impel the vessel forward. Hence an oar acts as a lever of the second kind, the fulcrum being really at the extremity of the blade.—*To boat the oars*, in *seamanship*, to cease rowing and lay the oars in the boat.—*To ship the oars*, to place them in the row-locks.—*To unship the oars*, to take them out of the row-locks.—*To feather the oars*, in rowing, is the art of turning their blades in a horizontal position, that they shall not hold the wind.—*To lie on the oars*, to suspend rowing for any interval; this is also the salute given to persons of distinction in passing.—*To get the oars to pass*, to prepare them for rowing.

In the desert of Sahara there are several of these. They serve as stopping-places for the caravans, and often contain villages. In Arabic, they are called *wadys*.
OAST, } *n*. [qu. Gr. *ἑστία*, or L. *ustus*.]
OUST, } A kiln to dry hops or malt.
OAT, *n*. [Sax. *ate*, oat or cockle, darnel; Russ. *oves* or *ovetsi*.] A plant of the genus Avena (*A. sativa*), and more usually, the seed of the plant. [*See* Avena.] The word is commonly used in the plural, especially when the seed or grain only is intended to be spoken of. The great use of oats, and the ease with which they are raised on almost every kind of soil, have made them occupy a place in almost every rotation of crops. The best oats are raised in Scotland and in Friesland. When ground into a coarse meal (*oatmeal*), they form a considerable portion of the food of labourers and many men in the middle ranks of life in Scotland, Ireland, and the north of England. They also furnish excellent food for horses. There are many varieties of the oat, as the *white* or *common oat*, the *black oat*, the *red oat*, the *Poland oat*, the *Dutch oat*, the *potato oat*, the *Georgian oat*, the *Siberian oat*, the *winter oat*, &c.

OATH, *n*. [Sax. *ath*; Goth. *aiths*; G. *eid*.] A solemn affirmation or declaration, made with an appeal to God for the truth of what is affirmed. The appeal to God in an oath, implies that the person imprecates his vengeance and renounces his favour if the declaration is false; or if the declaration is a promise, the person invokes the vengeance of God if he should fail to fulfil it. A false oath is called perjury. In *civil law*, oaths are divided into two classes:—1. Assertory oaths, or those by which something is asserted as true. 2. Promissory oaths, or those by which something is promised; such as the oaths of princes to rule constitutionally, or to protect such a sect or interest, &c.; the oath of allegiance, or that which binds the subject to bear true allegiance to the king; the oath of supremacy, or that which establishes the supremacy of the king over every other power; the oath of office; the oath of witnesses. Oaths to perform illegal acts do not bind, nor do they excuse the performance of the act. By statute, all who hold offices of any kind under the government, members of the house of commons, ecclesiastical persons, members of colleges, schoolmasters, serjeants-at-law, counsellors, attorneys, advocates, proctors, &c., are required to take the oaths of allegiance, &c.

OBE'DIENCE, *n*. [Fr.; from L. *obedientia*. *See* Obey.] Compliance with a command, prohibition, or known law and rule of duty prescribed; the performance of what is required or enjoined by authority, or the abstaining from what is prohibited, in compliance with the command or prohibition. To constitute obedience, the act or forbearance to act must be in submission to authority; the command must be known to the person, and his compliance must be in consequence of it, or it is not obedience. *Obedience* is not synonymous with *obsequiousness*; the latter often implying meanness or servility, and obedience being merely a proper submission to authority. That which duty requires implies dignity of conduct rather than servility. Obedience may be *voluntary* or *involuntary*. *Voluntary obedience* alone can be acceptable to God.—*Passive obedience*, in *politics*, the unqualified obedience which, according to some political philosophers, is due from subjects to the supreme power in the state; insomuch that not only its lawful but its unlawful commands may not be forcibly resisted without sin. [*See* Non-Resistance.]

> Government must compel the *obedience* of individuals; otherwise who will seek its protection or fear its vengeance? *Ames*.

OBE'DIENT, *a*. [L. *obediens*.] Submissive to authority; yielding compliance with commands, orders, or injunctions; performing what is required, or abstaining from what is forbidden.

OB'ELISK, *n*. [L. *obeliscus*; Gr. *ὀβελίσκος*, *dim*. of *ὀβελός*, a spit.] 1. A lofty quadrangular monolithic column of a pyramidal form; not, however, terminating in a point, nor truncated, but crowned by a flatter pyramid. The proportion of the thickness to the height is nearly the same in all obelisks; that is, between one-ninth and one-tenth; and the thickness at the top is never less than half, nor greater than three-fourths of the thickness at the bottom. Egypt abounded with obelisks, which were always of a single block of stone; and many have been removed thence to Rome and other places. It is generally believed that obelisks were originally erected as monumental structures, serving as ornaments to the open squares in which they were generally built, or intended to celebrate some important event, and to perpetuate its remembrance. They were usually adorned with hieroglyphics. The two largest obelisks were erected by Sesostris, in Heliopolis; the height of these was 180 feet. They

were removed to Rome by Augustus. —2. In *writing* and *printing*, a refer-

A *principal obligation* is that by which a debtor is bound to his creditor; an *accessory obligation*, that by which one is bound to another to satisfy the contract of a third party. In *Scots law*, an obligation is defined to be a legal tie by which one is bound to pay or perform something to another. The debtor whom the English term the obligor, is in Scotland termed the obligant or granter, and the creditor in the obligation (termed, in England, the obligee) the receiver or grantee. Obligations are of three kinds, natural, civil, and mixed. OCEAN, *n.* (o'shun.) [L. *oceanus*; Gr. ὠκεανος: Fr. *océan*; Ir. *ocein*, *aigein*; W. *eigiawn*, *aig*, or *eigion*. In Welsh, the word is rendered the great source, the middle, the abyss, or great deep, and is allied in orthography to *eigian*, force, or a forcing out, a producing; *eigiaw*, to bring forth, from *aig*, what brings forth, the female, the womb, the sea, a shoal of fishes, a flock or herd. Bochart cites many authorities to prove that the ancients understood the ocean to encompass the earth, and he supposes it to be derived from the Heb. Ch. and Syr. חוג, *hog*, to encompass, whence a circle. This is probably an error. The word seems to have for its origin greatness or extent.] 1. The vast body of water which covers more than three fifths of the surface of the globe, called also the sea, or great sea. Geographers divide the ocean into three great basins, viz., the Pacific ocean, the Atlantic ocean, and the Indian ocean. To these are sometimes added the Arctic or Northern ocean, and the Antarctic or Southern ocean. But the ocean is properly one mass or body of water, partially separated by the continents of Europe, Asia, and Africa on one side, and by America on the other. Other smaller portions of the great connected body of water are called seas, and usually receive their names from the countries they border upon. The bed of the ocean appears to present the same irregularities as the surface of the land, being diversified by rocks, mountains, plains, and deep valleys. In some places it has been found impossible to reach the bottom. Scoresby, in 1819, sounded in the North Atlantic with a line of 7200 feet, and found no bottom. The level of the ocean, generally speaking, is everywhere the same, but the disturbing actions of the sun and moon and of the winds occasion slight inequalities. The colour of the ocean is a bluish green; the blue tint seems to be occasioned by the blue rays being reflected in the greatest quantity, owing to their superior refrangibility. The other colours are ascribed to the existence of animalcules, to marine vegetables, and other local causes. The saltness of the ocean is owing to a variety of saline substances which it holds in solution, of which the most abundant by far is common salt, constituting in general about two-thirds of the whole. The degree of saltness, however, differs in different localities. The peculiar bitter taste is supposed to arise from vegetable and animal matter held in a state of decomposition near the surface. The specific gravity varies from 1.0269 to 1.0285.—2. An immense expanse; as, the boundless *ocean* of eternity; *oceans* of duration and space.

In *music*, an eighth, or an interval of seven degrees or twelve semitones. The octave is the most perfect of the chords, consisting of six full tones and two semi-tones major. It contains the whole diatonic scale. The most simple perception that we can have of two sounds, is that of unisons; the vibrations there beginning and ending together. The next to this is the octave, where the more acute sound makes precisely two vibrations, while the grave or deeper makes one; consequently, the vibrations of the two meet at every single vibration of the more grave one. Hence, unison and octave pass almost for the same concord; hence, also, the ratio of the two sounds that form the octave is as 1 to 2. The octave may be doubled, tripled, and multiplied at pleasure, without changing its nature, but a double octave is less agreeable to the ear than a single one; a triple octave, still less agreeable than a double one, and so on.

OF, *prep.* (ov.) [Sax. *of;* G. *ab;* Sw. Ice. Dan. and D. *af;* L. *ab*, but originally *af;* Gr. ἀπό. The primary sense is departing, issuing, or proceeding from; but this sense has been modified by usage.] From or out of; proceeding from, as the cause, source, means, author, or agent bestowing.

> I have received *of* the Lord that which also I delivered to you; 1 Cor. xi.
>
> For it was *of* the Lord to harden their hearts; Josh. xi.
>
> It is *of* the Lord's mercies that we are not consumed; Lam. iii.
>
> The whole disposing thereof is *of* the Lord; Prov. xvi.
>
> Go, inquire *of* the Lord for me; 2 Chron. xxxiv.
>
> That holy thing that shall be born *of* thee; Luke i.

Hence *of* is the sign of the genitive case, the case that denotes production; as, the son *of* man, the son proceeding from man, produced from man. This is the primary sense, although we now say, produced *by* man. "Part *of* these were slain;" that is, a number separate, for *part* denotes a division; the sense then is, a number *from* or *out of* the whole were slain. So also, "some *of* these were slain;" that is, some *from* or *out of* the others. "I have known him *of* old, or *of* a child;" that is, *from* old times, *from* a child. "He is *of* the race of kings;" that is, descended *from* kings. "He is *of* noble blood or birth, or *of* ignoble origin." "No particle of matter, or no body can move *of* itself;" that is, by force or strength *proceeding from* itself, derived *from* itself. "The quarrel is not now *of* fame and tribute, or *of* wrongs done;" that is, *from* fame or wrongs, as the cause, and we may render it, *concerning, about, relating to.* "*Of* this little he had some to spare;" that is, some *from* the whole. It may be rendered *out of.* "*Of* all our heroes thou canst boast alone;" that is, thou alone *from* the number of heroes. This may be rendered *among.* "The best *of* men, the most renowned *of* all;" that is, the best *from* the number of men, the *most* renowned *from* the whole; denoting primarily separation, like *part.* "I was well entertained *of* the English Consul;" that is, entertained *from* the Consul; my entertainment was *from* the Consul. This use is obsolete, and we use *by* in lieu of it. "This does *of* right belong to us;" that is, *from* right, *de jure;* our title proceeds from right. "The chariot was all *of* cedar;" that is, made *from* cedar. So we say, made *of* gold, made *of* clay; an application corresponding with our modern use of *from;* manufactured *from* wool, or *from* raw materials. Hence we say, cloth consisting *of* wool. "This is a scheme *of* his own devising;" that is, *from* his own devising or device. "If any man minister, let him do it as *of* the ability which God giveth;" that is, as *from* the ability, as the source of action. "*Of* happy, he is become miserable;" that is, *from* happy; *from* being happy, he has passed to being miserable. "*Of* necessity this must prove ruinous;" that is, *from* necessity, as the cause or source. "*Of* a hundred take fifty;" that is, *from* a hundred, or *out of* a hundred, *from* among a hundred. *Of* sometimes implies a part or share.

> It is a duty to communicate *of* those blessings we have received. *Franklin.*

From is then the primary sense of this preposition; a sense retained in *off*, the same word differently written for distinction. But this sense is appropriately lost in many of its applications; as, a man *of* genius, a man *of* courage, a man *of* rare endowments, a fossil *of* a red colour, or *of* a hexagonal figure. He lost all hope *of* relief. This is an affair *of* the cabinet. He is a man *of* decayed fortune. What is the price *of* corn? We say that *of*, in these and similar phrases, denotes property or possession, making *of* the sign of the genitive or possessive case. These applications, however, all proceeded from the same primary sense. That which proceeds from or is produced by a person, is naturally the property or possession of that person, as the son *of* John; and this idea of property in the course of time would pass to things not thus produced, but still bearing a relation to another thing. Thus we say, the father *of* a son, as well as the son *of* a father. In both senses, other languages also use the same word, as in the French *de, de la*, and Italian *di, dell. Of*, then, has one primary sense, *from*, departing, issuing, proceeding *from* or *out of*, and a derivative sense denoting possession or property. —*Of late*, in late times; lately.—*Of old*, in former times; formerly.

OFF, *adv.* (auf.) From, noting distance. The house is a mile *off.*—2. From, with the action of removing or separating; as, to take *off* the hat or cloak. So we say, to cut *off*, to pare *off*, to clip *off*, to peel *off*, to tear *off*, to march *off*, to fly *off.*—3. From, noting separation; as, the match is *off.*—4. From, noting departure, abatement, remission or a leaving. The fever goes *off;* the pain goes *off.*—5. In *painting*, it denotes projection or relief.

> This comes *off* well and excellent. *Shak.*

6. From; away; not toward; as, to look *off;* opposed to *on* or *toward.*—7. On the opposite side of a question.

In *marine language*, abreast of or near; as, we were *off* Cape Finisterre. OFF, *prep.* Not on; as, to be *off* one's legs. He was not *off* the bed the whole day.—2.† Distant from; as, about two miles *off* this town. *Off* may be regarded as an adjective in such phrases, as, *the off side* of a horse, that is, the right side in distinction from the *near* side. [*See* NEAR.]

Christ is called a stone of stumbling and rock of *offence* to both the houses of Israel; Ps. viii.—3. Any transgression of law, divine or human; a crime; sin; act of wickedness or omission of duty.

> Christ was delivered for our *offences*, and raised again for our justification; Rom. iv

In *law*, the word *offence* signifies an injury inflicted either against the public peace, in the person and property of an individual; against the laws of religion or decency, or against those laws of constitution and state recognised and allowed for the preservation of society. Those acts which involve wrongs against individuals in respect of their property or persons, may be termed *offences* against property, and *offences* against the person. These wrongs or offences may be also termed *private*, to distinguish them from injuries of a more public nature, and which peculiarly and directly affect the peace and welfare of the community at large. In a strict legal sense and understanding, the word *offence* signifies a mere breach of a penal statute, *not indictable*, but by which a forfeiture accrues to some one, which may be summarily inflicted by one or two magistrates, and is below a misdemeanour. The term, however, according to its generally received interpretation, includes all those injuries above stated.

To displease; to make angry; to affront. It expresses rather less than *make angry,* and without any modifying word, it is nearly synonymous with *displease.* We are *offended* by rudeness, incivility, and harsh language. Children *offend* their parents by disobedience, and parents *offend* their children by unreasonable austerity or restraint.

In a *modern sense, offerings* are church dues, payable by custom. In the Church of England they are reckoned among parson's tithes, payable by custom to the parson or vicar of the parish, either occasionally, as at sacraments, marriages, christenings, churching of women, burials, &c., or at constant times, as at Easter or Christmas. The law enforces the payment of these according to the custom of the place where they become due, but it seems that only one shilling need be given, or less according to the state in life of the parishioner.

The law prohibits the sale and brokerage of all offices in the gift of the crown, or of any office appointed by the crown, and particularly of those offices connected with the administration of justice; and the buying, selling, or the bargaining or soliciting for such offices by means of money, is declared to be a misdemeanour.—2. The distinctive characters of oil are, inflammability, insolubility in water, and fluidity, at least in a moderate temperature. Oils are divided into two kinds, the *fixed* or *fat oils,* and the *volatile* or *essential oils;* the former require a high temperature to raise them to a state of vapour, but the volatile oils are volatilized at the temperature of boiling water. When exposed to the action of the air, the oils by degrees lose their liquidity, thicken, and occasionally become hard. Such as become indurated so as not to stain paper when applied to it, are called *drying oils;* as linseed oil, poppy-seed oil, nut oil, &c. Such as do not harden in this way are called *unctuous oils;* as olive oil, almond oil, rape-seed oil, &c. The fixed or fat oils are either of vegetable or animal origin; they are compounds of carbon, hydrogen, and oxygen. Whale oil and spermaceti oil are examples of animal fixed oils. Vegetable fixed oils abound in the fruit and seed of certain plants, and are generally obtained from these by expression; they are lighter than water, unctuous and insipid, or nearly so; they all consist of two proximate principles, *stearine* and *elaine.* They are sources of artificial light, and when acted on by alkali form soaps. *Volatile oils* are generally obtained by distilling the vegetables which afford them with water; they are acrid, caustic, aromatic, and limpid; they are mostly soluble in alcohol, forming essences. A few of them, such as oil of turpentine, of lemon peel, of capivi balsam, &c., are hydrocarbons; the greater number, however, contain oxygen as one of their ultimate elements. They are chiefly used in medicine and perfumery; and a few of them are extensively employed in the arts as vehicles for colours, and in the manufacture of varnishes, especially oil of turpentine. Some oils are produced by heat from animal, mineral, and other substances; such as Dippel's oil, naphtha oil of amber, &c.; others, again, are produced by chemical action, as *oil of wine,* or ethereal oil; oil of vitriol, or sulphuric acid. [*See* FAT.]

but becoming black when ripe. It is bitter and nauseous, but replete with a bland oil. The olive flourishes only in warm and comparatively dry parts of the world, as the south of France and Spain; in Italy, Greece, Syria, and the north of Africa. In its wild state it is indigenous to Syria, Greece, and Africa on the lower slopes of mount Atlas. It grows slowly, and is very long-lived. The olive tree has in all ages been held in peculiar estimation. It was sacred to Minerva. Olive wreaths were used by the Greeks and Romans to crown the brows of victors, and it is still universally regarded as an emblem of peace. It furnished that oil which, for a long time, was the only kind known, and which was employed by most nations in religious ceremonies. Olive fruit intended for preservation is gathered before it is ripe. The wood of the olive tree is beautifully veined, and has an agreeable smell. It is in great esteem with cabinet-makers, on account of the fine polish of which it is susceptible. But the olive tree is principally cultivated for the sake of its oil, which is contained in the pericarp. [*See* OLIVE OIL.] It is cultivated for this purpose in Italy, France, Spain, Malta, Turkey, the Ionian Islands, &c. Another species of olive, the *O. fragrans*, inhabits China, Japan, and Cochin China. The flowers are used by the Chinese to mix with and perfume their tea, and also, together with the leaves, for adulterating tea. The only American species (*O. americanus*) is, in some districts, called *devil's wood*, on account of the excessive hardness of the wood and the extreme difficulty of splitting it.

OL'IVENITE, *n.* An ore of copper of an olive green colour. It occurs with quartz in micaceous clay-slate.

OL'IVE OIL, *n.* A fixed oil obtained by expression from the ripe fruit or pericarp of the olive (*O. europæa*). It is an insipid, inodorous, pale greenish yellow-coloured viscid fluid, unctuous to the feel, inflammable, incapable of combining with water, and nearly insoluble in alcohol. It is the lightest of all the fixed oils. That which is expressed from the ripe fruit immediately after being collected is most esteemed, and is called *virgin oil.* The common olive oil is obtained by a stronger pressure, or by the aid of heat, or after the olives, having been collected into heaps, have remained till a kind of fermentation has taken place. A still inferior quality is obtained when the husk of the olive, after the former treatment, is boiled in water. This is employed solely in the preparation of soap. Olive oil is frequently adulterated with poppy or rape oil. The best olive oil is said to be made in the vicinity of Aix, in France; the kind known by the name of Florence oil is also of a superior quality, and is mostly used for culinary purposes. By far the largest portion of olive oil brought to England is imported from Italy, principally from Gallipoli. Spain also sends us a large quantity. Olive oil is used in medicine as an emollient and to form cerates and plasters. It is also used in the manufacture of soap, and the finest kind is much employed with various articles of food, especially in the countries where it is produced. In this country it is extensively used in the woollen manufacture; and, as it is less apt than most other fixed oils to become viscid by exposure, it is preferred for greasing clock and watch-work.

OPINION, *n.* (opin'yon.) [Fr. *id.*; L. *opinio*, from *opinor*, to think, Gr. οιομαι; or Ar. *abana*, to think, to suspect. The primary sense is to set, to fix in the mind, as in L. *suppono*.] 1. The judgment which the mind forms of any proposition, statement, theory, or event, the truth or falsehood of which is supported by a degree of evidence that renders it probable, but does not produce absolute knowledge or certainty. It has been a received *opinion* that all matter is comprised in four elements. This *opinion* is proved by many discoveries to be false. From circumstances we form *opinions* respecting future events.

Opinion is when the assent of the understanding is so far gained by evidence of probability, that it rather inclines to one persuasion than to another, yet not without a mixture of uncertainty or doubting. *Hale.*

2. The judgment or sentiments which the mind forms of persons or their qualities. We speak of a good *opinion*, a favourable *opinion*, a bad *opinion*, a private *opinion*, and public or general *opinion*, &c.

Opium Papaver somniferum.

incisions made in the heads of the plant, and the best flows from the first incision. It is one of the most energetic of narcotics, and at the same time one of the most precious of all medicines, and is employed in a great variety of cases, but most commonly for the purpose of procuring sleep, and relief from pain; but its habitual use is attended with similar, if not worse effects than the intemperate use of ardent spirits. A full dose is intoxicating and exhilarating, but its effects are dangerous and fatal if taken in large quantities. It is heavy, of a dense texture, of a brownish yellow colour, not perfectly dry, but easily receiving an impression from the finger; it has a faint smell, and its taste is bitter and acrid. The chief active principle of opium is *morphia*, or *morphine* in combination with *meconic acid*. Opium also contains *narcotine*, *narceine*, *codeine*, *gum-resin*, *extractive matter*, and small portions of other proximate principles. Opium is chiefly prepared in India, Turkey, and Persia, but the white poppy is extensively cultivated in France and other parts of Europe on account of its capsules, and of the useful bland oil obtained from its seeds. The principal part of our supply of opium is brought from Turkey. It is brought in flat pieces or cakes, covered with leaves, and the capsules of some species of *rumex*.

OPO'PANAX, or **PASTINA'CA OPO'PANAX,** *n.* [L; Gr. ὀπος, juice, and πανξ, a plant.] An inspissated juice of a tolerably firm texture, imported in loose granules or drops, sometimes in larger masses. This substance on the outside is of a brownish red colour, with specks of white, and within of a dusky yellow or whitish colour. It has a strong smell and an acrid taste. It is obtained from an umbelliferous plant, the Opopanax Chironium, a native of the south of Europe, and also of Asia Minor. From the base of the stem or summit of the root of this plant when wounded flows a yellow milky juice which hardens on exposure to the sun and air. This constitutes *opoponax*. It consists of a fetid gum resin and volatile oil. It is imported from Turkey, and is used as an antispasmodic in nervous complaints.

OPOS'SUM, *n.* [This name is sometimes, though evidently most erroneously, pronounced *possum*.] The popular name of several species of Didelphys, a genus of marsupiate carnivorous mammals, characterized by three kinds of teeth, viz., incisors, canines, and molars; by hinder hands and a prehensile tail. They are fetid and nocturnal animals, arboreal in their habits, remaining on trees, and there pursuing birds, insects, &c., although they do not despise fruit. The females of certain species have an abdominal pouch in which are the mammæ, and in which they can enclose their young. The true opossums are now limited to the American continent, but their former existence in Europe is proved by the fossil remains that have been found in the Paris basin. The best known species of opossum is the *Didelphys virginiana*, very common

Virginian Opossum (Didelphys Virginiana).

in the United States. It is almost the size of a cat, the general colour whitish gray, and the whole hair of a wool-like softness. On the ground the motions of the opossum are awkward and clumsy, but on the branches of a tree he moves with great celerity and ease, using his tail, which is prehensile, to assist his motions. During the night he steals into villages, attacks fowls, eats their eggs, &c. He sometimes commits great depredations on orchards, but his favourite food is the persimmon. The female has from ten to fifteen young, which are for a long time nourished in the pouch, and to which they resort on the appearance of any danger.

to a tenet or doctrine, and is correlative to *defendant* or *respondent*. In common usage, however, it is applicable to either party in a controversy, denoting any person who opposes another or his cause. Opponent may sometimes be used for *adversary*, and for *antagonist*, but not with strict propriety, as the word does not necessarily imply enmity nor bodily strife. Nor is it well used in the sense of rival or competitor.

The deity who gave or was supposed to give answers to inquiries; as, the Delphic *oracle*.—3. The place where the answers were given. The Greeks surpassed every other nation both in the number and celebrity of their oracles, but those of Jupiter at Dodona, of Apollo at Delphi, and of Trophonius near Lebadeia, enjoyed the highest reputation.—4. The leaves are ovate, acute, pointed, and at the base of the petiole are winged. The fruit is globose, bright yellow, and contains a pulp which consists of a collection of oblong vesicles filled with a sugary and refreshing juice; it is divided into eight or ten compartments, each containing several seeds. This animal seems to be confined to Borneo, Sumatra, and Malacca. It is one of those animals which approach most

Orang-outang.

nearly to man, being in this respect only inferior to the *Chimpanzee*. It is utterly incapable of walking in a perfectly erect posture. Its body is covered with coarse hair of a brownish red colour; in some places on its back it is six inches long, and on its arms five inches. It attains the height of from four to five feet, measured in a straight line from the vertex to the heel. The arms reach to the ankle joint. These animals walk on their hind legs, feed on fruits, sleep on trees, and make a shelter against the inclemencies of the weather. They are remarkable for their strength as well as their ability to use weapons with the hand. [*See* CHIMPANZEE.]

ORA'TION, *n.* [L. *oratio*, from *oro*, to pray, to utter.] 1. A speech or discourse composed according to the rules of oratory, and spoken in public. Orations may be reduced to three kinds; demonstrative, deliberative, and judicial.—2. In *modern usage*, an oration differs from a sermon, from an argument at the bar, from a speech before a deliberative assembly, and from a popular harangue, though all these are orations in the generic sense. The word is now applied chiefly to discourses pronounced on special occasions, as a funeral *oration*, an *oration* on some anniversary, &c., and to academic declamations.

—3. A harangue; a public speech or address.—4. A speech in writing that has been spoken, or is proposed to be spoken.

The text is generally a dramatic poem; as, Handel's Samson, and Cimarosa's *Sacrifizio d'Abramo*. Sometimes it takes the form of a narrative, as *Israel in Egypt;* and occasionally it is of a mixed kind, as Haydn's *Creation*. The *Messiah* is a collection of passages from our received translation of the Scriptures. Both vocal and instrumental music are employed in oratorios.—2. A place of worship; a chapel.

OR'ATORY, *n.* [Low L. *oratoria*, from *orator*.] 1. The art of speaking well, or of speaking according to the rules of rhetoric, in order to persuade. To constitute *oratory*, the speaking must be just and pertinent to the subject; it must be methodical, all parts of the discourse being disposed in due order and connection; and it must be embellished with the beauties of language and pronounced with eloquence. Oratory consists of four parts, *invention, disposition, elocution*, and *pronunciation*.—2 Exercise of eloquence.—3 Among the *Romanists*, a close apartment near a bed-chamber, furnished with an altar, a crucifix, &c., for private devotions. The ancient oratories were small chapels attached to monasteries, in which the monks offered up their prayers.—4. A place allotted for prayer, or a place for public worship—*Priests of the Oratory*, a religious order, founded by Philip Neri in 1574, for the study of theology and for superintending the religious exercises of the devout. The *orbit* of the earth is nearly one hundred and ninety millions of miles in diameter. The *orbit* of the moon is 480,000 miles in diameter. The *orbits* of the planets are elliptical, having the sun in one of the foci; and they all move in these ellipses by this law, that a straight line drawn from the centre of the sun to the centre of any one of them, termed the *radius vector*, always describes equal areas in equal times. Also, the squares of the times of the planetary revolutions are as the cubes of their mean distances from the sun. The satellites also move in elliptical orbits, having their respective primaries in one of the foci. The *elements of an orbit* are those quantities by which its position and magnitude, for the time, are determined; such as the major axis and eccentricity, the longitude of the node, and inclination of the plane to the ecliptic, and the longitude of the perihelion.—2. The part of a theatre or other public place appropriated to the musicians. In the *Grecian theatres*, the orchestra was a part of the stage; it was of a semicircular form and surrounded with seats. ORCHIDA'CEÆ, *n.* [from L. *orchis*, one of the genera.] One of the most natural and well-defined orders of plants

in the vegetable kingdom. It consists of numerous genera and species. The plants of this order are found in almost all parts of the world; they are chiefly perennial and herbaceous. The flowers are monandrous, and the germen one-celled. They are more prized for their beauty and the strangeness of their flowers than for any very important dietetic or medicinal properties they possess. Many of them are found on the trunks and branches of trees: they are not parasites, but epiphytes.

ORCHID'EOUS, } *a.* [infra.] Per-
ORCHIDA'CEOUS, } taining to Orchis; belonging to the nat. order Orchidaceæ.

Few of the species produce seeds; and they are propagated by their tubers, which are of a peculiar structure. The flowers are

Sa'ep, (Orchis mascula).

so grotesque in form that we are forced to search for resemblances to them in the animal world. Hence we have such names among our native British orchises as the butterfly, monkey, lizard, and frog orchis. Several species are cultivated for the sake of their singular forms, their gay colours, and their delicious fragrance. In other respects they are of little value.

ORCHOT'OMY, *n.* [Gr. ὄρχις, a testicle, and τέμνω, to cut.] Castration; the operation of extracting a testicle.

OR'CINE, or **OR'CIN,** *n.* A peculiar colouring matter obtained from a species of lichen (*Variolaria orcina*). It is crystallized; its taste is sweet and nauseous. When exposed to air, charged with vapours of ammonia, it assumes, by degrees, a fine violet colour. Orcine is also a product of the decomposition of *Lecanorine.* When dissolved in ammonia, it gradually acquires a deep blood-red colour, and there is formed a compound of ammonia with a new substance called *Orceine,* which contains nitrogen as an essential element, besides that of the ammonia. On the addition of acetic acid, orceine is precipitated as a brownish red powder.

ORD, *n.* [Sax.] An edge or point; as in *ordhelm. Ord* signifies beginning; as in *ords* and *ends,* corrupted into *odds* and *ends.*

ORDĀIN, *v. t.* [L. *ordino,* from *ordo,* order; Fr. *ordonner;* It. *ordinare;* Sp. *ordenar;* Ir. *orduighim.*] 1. Properly, to set; to establish in a particular office or order; hence, to invest with a ministerial function or sacerdotal power; to introduce and establish or settle in the pastoral office with the customary forms and solemnities; as, to *ordain* a minister of the Gospel. —2. To appoint; to decree.

> Jeroboam *ordained* a feast in the eighth month; 1 Kings xii.

ORDĀINMENT, *n.* The act of ordaining.

OR'DEAL, *n.* [Sax. *ordal* or *ordæl:* G. *urtheil;* D. *ordeel.* The last syllable is *deal,* to divide or distribute. The sense of the prefix is less obvious. Wilkins supposes *or* to signify *without,* as in some Saxon words it has that sense, and *ordeal* to signify, without difference or distinction of persons, entire judgment. In Saxon, *ord* signifies origin, cause, beginning, prime. In G. *ur* signifies prime, very, original; *urwort,* primitive word. In Dutch, *oor* is the *ear; oorlog,* war. But this prefix would seem to be the same as in *furlow* [furlough;] for in G. *urlaub,* D. *oorlof,* Dan. *orlov,* Sw. *orlof,* is a furlow, and this indicates that *or* is a corruption of *far* or *for.* In Welsh, this word is *gordal,* which Owen compounds of *gor,* high, superior, extreme, above, and *tâl,* reward, requital; and *gordal* signifies not only *ordeal,* but an over-payment, a making satisfaction over and above. *Or* then may signify *out, away,* and in *ordeal* may denote *ultimate, final.* But the real sense is not obvious. The practice of ordeal, however, seems to have had its origin in the belief that the substances used had each its particular presiding deity that had perfect control over it.] 1. An ancient form of trial to determine guilt or innocence, practised by the rude nations of Europe, and still practised in the East Indies. In *England,* the ordeal was of two sorts, *fire-ordeal* and *water-ordeal;* the former being confined to persons of higher rank, the latter to the common people. Both might be performed by deputy, but the principal was to answer for the success of the trial. *Fire-ordeal* was performed either by taking in the hand a piece of red-hot iron, or by walking barefoot and blindfold over nine red-hot ploughshares laid lengthwise at unequal distances; and if the person escaped unhurt, he was adjudged innocent, otherwise he was condemned as guilty. *Water-ordeal* was performed either by plunging the bare arm to the elbow in boiling water, or by casting the person suspected into a river or pond of cold water, and if he floated without an effort to swim, it was an evidence of guilt, but if he sunk he was acquitted. Both in England and Sweden, the clergy presided at this trial. It was at last condemned as unlawful by the canon law, and in England it was abolished by an order in council of Henry III. It is probable our proverbial phrase, to *go through fire and water,* denoting severe trial or danger, is derived from the ordeal; as also the trial of witches by water.—2. Severe trial; accurate scrutiny.

OR'DER, *n.* [L. *ordo;* [qu. Pers. *radah,* order, series;] Fr. *ordre;* Sp. *orden;* Sw. Dan G. and Russ. *id.;* Ir. *ord;* but all from the Latin except the Persian] 1. Regular disposition or methodical arrangement of things; *a word of extensive application;* as, the *order* of troops on parade; the *order* of books in a library; the *order* of proceedings in a legislative assembly. *Order* is the life of business.

> Good *order* is the foundation of all good things. *Burke.*

2 Proper state; as, the muskets are all in good *order.* When the bodily organs are in *order,* a person is in health; when they are out of *order,* he is indisposed.—3. Adherence to the point in discussion, according to established rules of debate; as, the member is not in *order,* that is, he wanders from the question.—4. Established mode of proceeding. The motion is not in *order.* —5. Regularity; settled mode of operation. This fact could not occur in the *order* of nature; it is against the natural *order* of things.—6. Mandate; precept; command; authoritative direction. I have received an *order* from the commander in chief. The general gave *orders* to march. There is an *order* of council to issue letters of marque.—7. Rule; regulation; as, the rules and *orders* of a legislative house. —8. Regular government or discipline. It is necessary for society that good *order* should be observed. The meeting was turbulent; it was impossible to keep *order.*—9. Rank; class; division of men; as, the *order* of nobles; the *order* of priests; the higher *orders* of society; men of the lowest *order; order* of knights; military *orders,* &c. —10. A religious fraternity; as, the *order* of Benedictines.—11. A division of natural objects, generally intermediate between class and genus; as, an *order* of animals, plants, or minerals. The classes, in the Linnæan artificial system, are divided into *orders,* which include one or more genera. Linnæus also arranged vegetables in his natural system, into groups of genera, called *orders.* In the natural system of Jussieu, *orders* are subdivisions of classes. [*See* NATURAL.]—12. Measures; care. Take some *order* for the safety and support of the soldiers.

> Provide me soldiers
> Whilst I take *order* for my own affairs. *Shak.*

13. In *rhet.,* the placing of words and members in a sentence in such a manner as to contribute to force and beauty

of expression, or to the clear illustration of the subject.—14. The title of certain ancient books containing the divine office and manner of its performance.—15. In *arch.*, a system or assemblage of parts subject to certain uniform established proportions, which are regulated by the office each part has to perform. An order may be said to be the genus, of which the species are five, viz., Tuscan, Doric, Ionic, Corinthian, and Composite [*see* these terms]; but it is usual to give to these five the name of orders. Each order consists of two essential parts, a column and an entablature: the column is divided into three parts, the base, the shaft, and the capital; and the entablature is divided into three parts also, the architrave, the frieze, and the cornice. In the subdivisions certain horizontal members are used which, from the curved forms of their edges, are called mouldings; as the ovolo, cyma, cavetto, torus, &c. The character of an order is displayed, not only in its column, but in its general forms and detail, of which the column is, as it were, the regulator, the expression being of strength, grace, elegance, lightness, or richness. The scale for the proportions—that is, not the actual but the relative dimensions of the different parts compared with each other—is taken from the lower diameter of the shaft of the column, which is divided into two modules or sixty minutes. [*See* COLUMN.] The Tuscan and Composite are Roman orders, the other three are Grecian. 16. In the *fine arts*, the regular disposition of the parts of a work, so that neither confusion nor jarring effects may prevail. —17. In *geom.*, applied to lines, curves, &c., and taken in the sense of rank or situation in a series. *Order of curves* is denominated from the rank or order of the equation by which the curve is expressed; thus, the first order of lines is expressed by a simple equation; the second order of curves is defined by a quadratic equation; the third order by a cubic equation, and so on. The orders of lines may likewise be denominated from the number of points in which they may be cut by a right line. —*Order of superposition*, a geological term implying the regular succession of arrangements, which the strata, forming the exterior crust of our globe, invariably follow. Although certain strata, or formations, are occasionally wanting, they never depart from a constant order of superposition.—*Order of the day.* In *parliamentary usage* one method of superseding a question already proposed to the house is by moving for "the order of the day to be read." This motion, to entitle it to precedence, must be for the order generally, and not for any particular order; and if this is carried, the orders must be read and proceeded on in the course in which they stand. But it can be, in its turn, superseded by a motion to adjourn.—*In orders*, set apart for the performance of divine service; ordained to the work of the gospel ministry. To be in *full orders* in the church of England requires two ordinations, that of a deacon and that of a priest. [*See* ORDINATION.]—*In order*, for the purpose; to the end; as means to an end. The best knowledge is that which is of the greatest use *in order* to our eternal happiness.—*To take orders*, to have a license to preach the gospel, and perform other ministerial functions.—*General orders*, the commands or notices which a military commander in chief issues to the troops under his command.—*Holy orders*, a term, properly speaking, applied to the different ranks of ecclesiastical persons, but, in ordinary language, used to indicate the character of such persons. The Roman Catholic church admits of seven orders —four minor, secular, or petty, of door-keeper, exorcist, reader, and acolyth; three major, of deacon, priest, and bishop. In no reformed church are there more than three orders; namely, bishops, priests, deacons.—*Religious orders* are of three kinds, monastic, military, and mendicant.—*Orders*, in *law*, are the rules made by courts in causes there depending, which, when drawn up and entered by the registrar in the court of chancery, or the clerk of the rules in the king's bench, &c., become orders of the court.—*Orders in council*, orders issued by the sovereign, by and with the advice of the privy council.—*Order of battle*, the arrangement and disposition of the different parts of an army, according to the nature of the ground, for the purpose of engaging an enemy, by giving or receiving an attack, or in order to be reviewed, &c.—*Close order* is said of the ranks when drawn up at the distance of a pace between each other. When there are two paces, it is termed *open order*.—*Standing orders*, certain general rules and instructions which are to be invariably followed. —*Sailing orders*, the final instructions given to ships of war.

In this sense it is often used in the Scriptures; Exod. xv.; Num. x; Ezra iii. It may also signify a decree, edict, or rescript, and the word has sometimes been applied to the statutes of parliament, but these are usually called acts or laws.—2. Observance commanded.—3. OR'DINARY, *n.* In the *common* and *canon law*, one who has ordinary or immediate jurisdiction in matters ecclesiastical; an ecclesiastical judge. In *England*, the bishop of the diocese is commonly the *ordinary*, and the archbishop is the *ordinary* of the whole province. The same name is applied to every commissary or official of the bishop. The *ordinary* of assizes and sessions was formerly a deputy of the bishop appointed to give malefactors their neck-verses. The *ordinary* of Newgate is one who attends on condemned malefactors to prepare them for death.—2. Settled establishment; constant office.—3. A regular meal, as a dinner, established at a certain price;

OR'DINATE, *n.* In the *theory of curves*, any straight line, drawn from a point in the abscissa to terminate in the curve; if it be drawn perpendicular to the abscissa it is called a *rectangular ordinate;* if not, it is called an *oblique ordinate*. The abscissa and ordinate, when spoken of together, without any peculiar specification of either, are called *co-ordinates*. The co-ordinates may be inclined to each other at any angle, but, in general, the investigations respecting curves are much simplified by assuming them at right angles. In the conic sections any chord which is bisected by a diameter, is said to be *ordinately* applied to that diameter; also, such chord is usually called a *double ordinate* to the diameter, and its half an *ordinate*, but some writers term the whole chord an *ordinate*, and its half a *semi-ordinate*. In the hyperbola a straight line not passing through the centre, but terminated both ways by opposite hyperbolas and bisected by a diameter, is also said to be *ordinately* applied to that diameter, and its half is called an ordinate to the diameter. In the conic sections all the ordinates of the axis are perpendicular to it, and the double ordinates are all bisected by the axis. In curves of a higher order where a line may cut the curve in more than two points, the ordinate on the one side of the axis is always equal to the sum of the ordinates on the other.

OR'DINATELY, *adv.* In a regular methodical manner.

ORDINA'TION, *n.* [L. *ordinatio.*] 1. The state of being ordained or appointed; established order or tendency consequent on a decree.

2. The act of conferring holy orders or sacerdotal power; called also consecration. In the *church of England*, a candidate for holy orders must be in possession of a *title;* that is, a sort of assurance from a rector to the bishop, that, provided that the latter finds the party fit to be ordained, the former will take him for his curate with a stated salary. The candidate is then examined by the bishop or his chaplain as to his faith and his erudition, and he must bring letters testimonial of his life and doctrine for three years previous, from three beneficed clergymen, and subscribe to the Thirty-nine Articles and the Liturgy. He must be twenty-three years of age before he can be ordained deacon, and twenty-four before he can be ordained priest, or admitted into *full orders*. The ceremony of ordination is performed by the bishop by the imposition of hands on the candidate.—3. In the *presbyterian* and *congregational churches*, the act of settling or establishing a licensed clergyman over a church and congregation with pastoral charge and authority; also, the act of conferring on a clergyman the powers of a settled minister of the Gospel, without the charge or oversight of a particular church, but with the general powers of an evangelist, who is authorized to form churches and administer the sacraments of baptism and the Lord's supper, wherever he may be called to officiate. ORE, *n.* [Sax. *ore*, *ora;* G. *erz*. Qu. L. *æs*, *æris*, brass.] 1. The compound of a metal and some other substance, as oxygen, sulphur, or carbon, called its mineralizer, by which its properties are disguised or lost. Metals found free from such combination and exhibiting naturally their appropriate character, are not called ores, but native metals. Ores, practically speaking, may be defined to be those mineral bodies which contain so much metal as to be worth the smelting, or being reduced by fire to the metallic state. The substances naturally combined with metals which mask their metallic characters, are chiefly oxygen, chlorine, sulphur, phosphorus, selenium, arsenic, water, and several acids, of which the carbonic is the most common. Some metals, as gold, silver, platinum, often occur in the metallic state, either alone or combined with other metals, constituting what are called native alloys. Certain ores which contain the metals most indispensable to human necessities have been treasured up by the Creator in very bountiful deposits; constituting either great masses in rocks of different kinds, or distributed in lodes, veins, nests, concretions, or beds, with stony or earthy admixtures; the whole of which become the object of mineral exploration.—2. Metal; as, the liquid *ore*.

Thus the arteries and veins of animal bodies are *organs* of circulation; the lungs are *organs* of respiration; the nerves are *organs* of perception and sensation; the muscles are *organs* of motion; the ears are *organs* of hearing; the tongue is the *organ* of speech. In *bot.*, the *organs* of plants are the distinct parts of which they are composed.—*Compound organs*, those composed of the elementary tissues.—*Nutritive*, or *conservative organs*, those by which the function of nutrition is performed; the root, stem, and leaves.—*Perfected organs*, the root, stem, leaves, flowers, and fruit.—*Reproductive organs*, those by which the function of reproduction is performed; the flower and fruit.—*Rudimentary organs*, those developed in the seed when germinating.—2. The instrument or means of conveyance or communication. A secretary of state is the *organ* of communication between the government and a foreign power.—3. The largest and most harmonious of wind instruments of music, consisting of a great number of pipes of different sizes, formed of wood and of different kinds of metal, some of which are flute-pipes, or mouth-pipes, and others reed-pipes; which all of these are made to sound by means of compressed air applied to them through certain channels by bellows worked either by human force or by mechanism. The great church-organ has usually three rows of finger-keys, placed above each other like steps. In some of the largest there are four, or even five such rows of keys. Besides these there are rows

of pedals or foot-keys which act upon the larger pipes of the organ. The size of an organ is usually expressed by the length of its largest pipes; thus, an organ of thirty-two feet, of sixteen feet, &c., is one whose lowest bass pipes are of those respective lengths. The key-boards of organs vary in extent; the York organ has six octaves; the Birmingham five and a half, but the compass now in general use is four and a half. The *barrel organ* is an instrument by which most of the effects of a small keyed-organ are produced by certain machinery. The keys, if so they may be called, are placed inside

Produced by the organs; as, *organic* pleasure.—3. Instrumental; acting as instruments of nature or art to a certain end; as, *organic* arts.—*Organic bodies* are such as possess organs, on the action of which depend their growth and perfection; as animals and plants.—*Organic remains*, the name given by geologists to those organized bodies, whether of animals or vegetables, found in a fossil state, imbedded in rocky strata or loose in the earth. Certain families of animals are found pervading strata of every age, and possessing the same generic forms which are to be found among existing animals. There are, however, other families, both animal and vegetable, which are confined to particular formations, where whole groups of these have been annihilated, and have been replaced by others bearing widely different characters; and the changes of genera and species are still more frequent. It is in strata of the transition series that the first remains of organized beings begin to be found, but these are of the most simple construction in their parts, especially in the inferior regions of this series. But we find in them the remains of the four established divisions of the animal kingdom; viz., *vertebrata, mollusca, articulata*, and *radiata*. In the secondary strata we find a series of saurian reptiles, principally of a gigantic size; many of them marine, others amphibious, and others terrestrial. In the tertiary series we find that the fossil remains of both animals and vegetables are much more numerous, and greatly more perfect in their organization; and that they bring us down, by a natural transition, to those of our own times. Subterraneous collections of bituminized wood, and other vegetable matter, are found at various depths in different parts of the world. Cannel coal, as well as anthracite, frequently exhibits traces of ligneous texture in its substance which could have been derived only from wood. The argillaceous iron-stone and slates that accompany coal, contain, with remains of many other unknown vegetables, parts of various cryptogamous plants, the recent analogies of which are found only in tropical regions. [*See* FOSSIL, EOCENE, MIOCENE, PLIOCENE, FORMATION, STRATUM.]—*Organic chemistry. See* CHEMISTRY.—*Organical description of curves*, in *geom.*, the description of curves on a plane by means of instruments.—*Organic disease*, a disease in which the structure of an organ is morbidly altered; opposed to *functional* disease, in which the secretions or functions only are deranged without any apparent change of organization. —*Organic laws*, in *modern political phraseology*, the name given to laws directly concerning the fundamental parts of the constitution of a state.

Birds form the second great division of the animal kingdom: they may be defined as vertebrated oviparous animals, covered with feathers, organized for flight, and enjoying a double system of circulation and respiration, while the whole system is provided with reservoirs of air, in addition to the lungs properly so called. Their distribution is founded on the organs of manducation, or the beak, and on those of prehension; that is, on the beak, and particularly on the feet. Different classifications of birds have been adopted by different ornithologists. The first part of the word in Fr. is from L. *avis*. The primary sense of *struz*, *struthio*, &c., is to reach, stretch, extend, or erect; but whether this name was given to the fowl from its stately walk or appearance, or from some part of its plumage, let the reader judge.] The popular name of a brevipen grallatory fowl, which is one of the species of the genus Struthio. The ostrich, properly so called (*struthio-camelus*), is a native of Africa and of the adjoining parts of Asia. This is

the largest of all fowls, being four feet high from the ground to the top of the back, and seven, eight, and it is said even ten to the top of the head, when standing erect. Its thighs and the sides of the body are naked, and the wings are so short as to be unfit for flying The plumage is elegant, and much used in ornamental and showy dress. The speed of this fowl in running exceeds that of the fleetest horse. The female lays from ten to twelve eggs in the sand, and although she does not incubate them continually, no bird has a stronger affection for its offspring, or watches its nest with greater assiduity, always brooding over her eggs at night, and only leaving them during the hottest parts of the day. The American ostrich (*S. rhea*) is a smaller species than the African, but in every thing, except the beauty of its plumage, it bears a close resemblance to it. ŌWE, *v. t.* (o.) [a regular verb, pret. and pp. *owed*; used with the auxiliary *have*, *had*, but not with the substantive verb to *be.* This verb is doubtless the Sax. *agan*, Goth. *aigan*, Sw. *äga*, Ice. *eg*, to have or possess, that is, to hold or retain, coinciding with the Gr. ἔχω. The Sax. participle *agen*, Dan. *egen*, is the English *own.* *Ought* is a derivative tense, and was formerly used in the sense of *owed.* The proper sense of *owe*, is to be held or bound to pay; nearly as we now use *have* in the phrases, "I *have* to pay a sum of money to-morrow," "I *have* to go to town to-day."] 1. To be indebted; to be obliged or bound to pay. The merchants *owe* a large sum to foreigners.

> A son *owes* help and honour to his father. *Holyday.*

4. To be due or owing.

> O deem thy fall not *ow'd* to man's decree.† *Pope.*

OWL, *n.* [Sax. *ula*, *ule*; G. *eule*; Sw. *ugla* or *uggla*; L. *ulula.* The orthography, except in the Swedish, coincides with *howl*, L. *ululo*; but the radical letters are not obvious.] A fowl of the genus Strix, that flies chiefly in the night. The popular name of a group of nocturnal accipitrine birds (*strigidæ*), comprehended under the Linnæan genus Strix, which has

been subdivided by later naturalists. These birds are found in every country, but their head-quarters may be said to be in northerly and cold climates. They feed, for the most part, upon small mammalia, little birds, and insects. The head is large, the eyes very large, directed to the front, and covered by a circular concha or shell of feathers. The irides expand to a great size during the night, which enables the owl to see better during the night than diurnal birds. During the day the irides are contracted to a very small size. The voice of the owl is harsh and screeching. The most common species is the barn owl (*Strix flammea*), which frequents barns, towers, churches, old ruins, &c. Other species are, the horned owl, long-eared, and short-eared owls, scops-eared owl, snowy owl, tawny owl, and little owl.

In the phrases, his *own* nation, his *own* country, the word *own* denotes that the person belongs to the nation or country.—2. *Own* often follows a verb; as, the book is not my *own,* that is, my *own book.*—3 It is used as a substitute.

That they may dwell in a place of their *own;* 2 Sam. vii.

In this use, a noun cannot follow *own.* —4. "He came to his *own,* and his *own* received him not," that is, his *own* nation or people; *own* being here used as a substitute, like many other adjectives.

The young castrated male is called a *steer.* He is called an *ox-calf* or *bull-calf* until he is a year old, and a *steer* until he is four years old. The same animal not castrated is called a *bull.* The common ox is one of the most valuable of our domestic animals. Its flesh is the principal article of animal food; the horns are converted into combs, knife-handles, &c.; the bones form a cheap substitute for ivory; the blood is employed in the manufacture of Prussian blue; the hair is used by plasterers; the skin forms excellent leather; and the fat is employed in the manufacture of candles and soap. As an animal of draught he is hardy, patient, and docile; but in this country his value is now chiefly estimated by the quantity and quality of the meat that he will yield, according to the care that is bestowed upon him and the expense that is incurred. There are many varieties or breeds of the common ox, as the long-horned, short-horned, polled or hornless breeds, &c. [*See* COW.] Besides the European ox, there are several other cultivated varieties; as, the Indian, Zebu, Surat, Abyssinian, Madagascar, Tinian, and African. The wild ox is the *Bos urus.*

The species are natives of all the hotter and temperate parts of the world, and most abundant in America and the Cape of Good Hope. The genus Oxalis, which is the type, is called wood-sorrel, from the acidity of the leaves, and the natural habitation of the European species in a wild state. It is, however, most common at the Cape of Good Hope, where the species are extremely ornamental. In the East Indies the genus Averrhoa produces a fruit (the *carambola* or *blimbing*) used for pickling and preserving. The Bri-

Oxalis acetosella (Wood Sorrel).

tish *Oxalis acetosella*, or common wood-sorrel, has been supposed to be the true shamrock of the Irish. OXYFLU'ORIDES, *n.* Compounds of oxides and fluorides, as the *oxyfluoride* of lead.

OX'YGEN, *n.* [Gr. ὀξύς, acid, and γεννάω, to generate.] In *chem.*, an electro-negative basifying and acidifying elementary principle. Its properties are best known and most remarkable in its elastic or aeriform state, in which it is termed *oxygen gas*. It was named by Dr. Priestley, the discoverer, *dephlogisticated air*; by Scheele it was named *empyreal air*, and by Condorcet *vital air*. It is the vital part of the atmosphere and the supporter of ordinary combustion. It was named from its property of generating acids. Modern experiments prove that it is not necessary in all cases to combustion or to acidity. For ordinary purposes it is obtained from the binoxide of manganese by the application of heat, but when the gas is required in a pure state, for chemical analysis or accurate investigations, it is obtained from chlorate of potash. Oxygen is a permanently elastic fluid, invisible, inodorous, and a little heavier than atmospheric air. In union with azote or nitrogen, it forms atmospheric air, of which it constitutes about a fifth part. Water contains about eighty-nine per cent. of it, and it exists in most vegetable and animal products, acids, salts and oxides. It is not absorbed by water, and is neither acid nor alkaline. It has a powerful attraction for most of the simple substances, especially for the electro-positive bodies; the act of combining with it is called oxidation. The compounds thus formed are divided into *acids* and *oxides*; among the latter are the alkalies, and almost all salifiable bases. Oxidation is often attended with the evolution of heat and light, as in all processes of combustion in atmospheric air; sometimes the oxidation is slow and unattended with such phenomena, as in the gradual rusting of metals. All substances that are capable of burning in the open air, burn with far greater brilliancy in oxygen gas; phosphorus burns in it with so powerful and dazzling a light that the eye cannot bear its impression. Even iron and steel, when previously heated to redness, burn rapidly in oxygen gas. Combustion is the union of inflammable matter with oxygen. [*See* COMBUSTION.] Oxygen gas is necessary to respiration, and no animal can live in an atmosphere which does not contain a certain portion of uncombined oxygen. Pure oxygen is too highly stimulating for animal existence, and it accordingly appears that it is owing to the proportion in which it is combined with nitrogen in our atmosphere that it becomes precisely adapted to the support of life. Oxygen is evolved from trees and plants by the action of the sun's rays on the moistened leaves; and these leaves, while they give out oxygen, absorb carbonic acid from the atmosphere for their nourishment.

OXYHY'DROGEN MICROSCOPE, *n.* A kind of microscope which has now almost entirely superseded the solar microscope. The commissions of oyer and terminer are the most comprehensive of the several commissions, which constitute the authority of the judges of assize on the circuits. A court of oyer and terminer is constituted by a commission to inquire, hear, and determine all treasons, felonies, and misdemeanours.—2. Painting, as to its subjects, is divided into twelve branches, which their names sufficiently explain; *viz.* history, which comprises mystery and allegory; grotesque, portrait, fancy, animals, fruits, and flowers, battle pieces, landscapes, sea views; still life, which comprises all inanimate objects, but is chiefly applied to household furniture, and instruments, and architecture.—*House painting,* which belongs to the last division, is the art of covering with various suitable pigments, the wood-work, plaster-walls and ceilings, iron-work, &c. of the interior and exterior of houses. In this language, as in Spanish, *par,* pair, is shown to be connected with the L. *paro,* to prepare. Now in Heb. Ch. Syr. and Eth. חבר, *chabar,* signifies to join, couple, or associate, and the noun, an associate, evidently this very word; which goes far to prove that חבר, *chabar,* is a derivative of the root ברא, *bara,* from which the Latins probably have *paro.* The primary sense of the root is to throw, strain, and extend, and hence *par,* equal, is extended to near, contiguous, or equally extended.] 1. In *England*, formerly, were three counties *palatine*, Chester, Durham, and Lancaster; the two former by prescription, the latter by grant of Edward III. They were so called, because the proprietors, the earl of Chester, the bishop of Durham, and the duke of Lancaster, possessed royal rights, as fully as the king in his palace. The counties of Chester and Lancaster, which are now united to the crown, retain little more of their former palatine state than the existence of certain courts peculiar to the counties, and certain rights as to pleas. Durham continued as a county palatine in the hands of a subject till the year 1836, the bishop having been prince palatine, and possessing jura regalia till that time. By the 6 and 7 Wm. A metal discovered in 1803 by Wollaston, and found in very small grains, of a steel grey colour and fibrous structure, in auriferous and platiniferous sand. It is infusible by ordinary heat, and when native, is alloyed with a little platinum and iridium. It is ductile as well as malleable, and is considerably harder than platinum. Its specific gravity varies from 11.3 to 11.8. In fusibility it is intermediate between gold and platinum. It is oxidized and dissolved by nitric acid, but its proper solvent is nitro-hydrochloric acid. Its oxide forms beautiful red coloured salts, from which metallic palladium is precipitated by sulphate of protoxide of iron and by most of the metals. It forms alloys, most of which are brittle, with arsenic, iron, bismuth, lead, tin, copper, silver, platinum, and gold; the alloy with nickel is ductile.

PAL'LAS, *n.* One of the four small planets revolving between the orbits of Mars and Jupiter; discovered by Dr. Olbers, at Bremen, March 28, 1802. On account of the minuteness of this planet, and the nebulous appearance by which it is surrounded, it is extremely difficult to arrive at any certain conclusion respecting its real magnitude. Dr. Herschel estimated its diameter at 80 miles, and its period of revolution, according to Encke, is 1686.25 days. Its light undergoes considerable variations, and its motion in its orbit is greatly disturbed by the powerful attraction of Jupiter.

The palms are, doubtless, the most interesting race of plants in the vegetable kingdom, if we consider the majestic aspect of their towering stems, crowned by a still more gigantic foliage; the character of grandeur which they impress upon the landscape of the countries which they inhabit; their immense value to mankind, as affording food and raiment, and numerous objects of economical importance; or, finally, the prodigious development of those organs by which their race is to be propagated. While some, as *Kunthia montana, Aiphanes praga, Oreodora frigida*, have trunks as slender as the reed, or longer than the longest cable; (*Calamus rudentum* being 500 feet), others, as *Jubæa spectabilis* and *Cocus butyracea*, are three and even five feet thick; while some have a low caudex, as *Attalea amygdalina*, others exhibit a towering stem from 160 to 180 feet high, as *Ceroxylon andicola.* Also, while many have a cylindrical undivided stem, the Doum palm of Upper Egypt, and the *Hyphæne coriacea*, are remarkable for their dichotomous repeatedly-divided trunk. It is supposed that there are about 1000 species of palms, and these are divided into fifty-nine genera. It consists of herbaceous plants abounding in milky juice. There are upwards of twenty species, chiefly found in European countries, but few of them are remarkable for any useful properties. The British species, of which there are six, are distinguished as having some rough, others smooth capsules. *P. hybridum*, or round rough-headed poppy, and *P. argemone*, or long rough-headed poppy, are of the former class; and *P. dubium*, or long smooth-headed poppy, and *P. rhœas*, or common red poppy, of the latter. The most important species, *P. somniferum*, or white poppy, although found wild in Britain, and in many other parts of Europe, is probably a native of Asia Minor, or of some part of the Persian region of botanists. There are two distinct varieties, the dark, the red-flowered and black-seeded, and the white-flowered, with white seeds, called by some *P. officinale*. The poppy is cultivated in many parts of Europe on account of its seeds, which yield a bland oil, much esteemed in France and in this country on account of the capsules, which are used medicinally. It is extensively cultivated in Turkey and Asia Minor, Egypt, Persia, and India, on account of its inspissated juice, so well known as opium, occasionally prepared also in Europe.

of eighteen or twenty feet, with a soft herbaceous stem, naked nearly to the top, where the leaves issue on every side on long foot-stalks. Between the leaves grow the flower and the fruit, which is of the size of a melon. The juice is acrid and milky, but the fruit when boiled is eaten with meat, like other vegetables. The juice of the unripe fruit is a most powerful and efficient vermifuge; the powder of the seed even answers the same purpose. The tree is also said to have the singular property of rendering the toughest animal substances tender. It is even said that newly-killed meat suspended among the leaves, and even old hogs and old poultry, when fed on the leaves and fruit, become tender in a few days.—2. The papaw of North America belongs to the genus Annona or custard-apple.

A parable is defined by Bishop Lowth as "a continued narrative of a fictitious event, applied by way of simile to the illustration of some important truth." The given line B H is called the *directrix*, and the given point F, the *focus*. The line F A C, drawn through the focus, perpendicular to B H, is called the *axis*, or *principal diameter*, and any line D R, parallel to it is called a *diameter* A straight line Q S, terminated both ways by the parabola, is called a *chord*, and a chord, as Q S, bisected by a diameter D R, is said to be *ordinately applied* to that diameter, and its half is called an *ordinate* to that diameter. The segment D R of a diameter, between its vertex D, and an ordinate, is called an *abscissa*. An ordinate to the axis is a line drawn from any point in the curve perpendicular to it, as D F. If y denote an ordinate to any diameter, x the corresponding abscissa, and p the parameter of the diameter, then $y^2 = p\,x$, which is called the equation of the parabola. [*See* PARAMETER.] The parabola was formerly supposed to be the curve in which a comet moved. It is the curve in which a cannon ball or other projectile would move, were it not for the

In the ellipse and hyperbola, the parameter of a diameter is a third proportional to that diameter and its conjugate. The term is also used in a general sense to denote the constant quantity which enters into the equation of a curve.

Its object is to express the full sense contained in the words which are paraphrased, by the introduction of circumlocutions, explanatory clauses, and expansions of the author's meaning.

The public storehouse in which this corn was deposited was called παρασιτιον. The parasites also superintended the sacrifices. In every village of the Athenians certain parasites (*parasiti*), in honour of Hercules, were maintained at the public expense; but, to ease the commonwealth of this burden, the magistrates at last obliged some of the richer sort to take them to their own tables, and entertain them at their individual expense. Parasitical plants, properly so called, are very numerous, and belong to various parts of the vegetable kingdom. Physiologists have divided them into *intestinal*, or such as spring from the interior of plants, and *superficial*, or such as attach themselves to the surface of plants. The former are exclusively fungi, and appear under the forms to which the popular names of mildew, rust, brand, smut, &c., are applied. It is among the latter that parasites of so many different kinds are to be met with. Of this kind are the misletoe, the broom rape (*Orobanche*), the *Lathræa*, *Rafflesia*, *Rhizanths*, &c.—3. PAR'ISH, *n.* [Fr. *paroisse;* It. *parrocchia;* Ir. *parraiste;* usually deduced from the Low L. *parochia*, Gr. παροικια, a dwelling or near residence; παρα, near, and οικος, house, or οικεω, to dwell; or more probably from the Gr. παροχη, a salary or largess, an allowance for support, from παρεχω, to afford, yield, or supply, whence L. *parocha*, entertainment given to ambassadors at the public expense; whence It. *parrocchii*. If *Parish* is to be deduced from either of these sources, it is probably from the latter, and *parish* is equivalent to benefice, living, as prebend from L. *præbeo*. In Ger., *pfarre* signifies a benefice or parish; *pfarrer* or *pfarrherr*, a parson, the lord of a living or parish, and this is evidently from the same root as *parson*. We know not the origin of *pfarre*, but it coincides in elements with the W. *pori*, to graze, Corn. *peuri* L. *voro*, Gr. βορα. The Italian and Spanish words are undoubtedly from the Latin and Greek, and the French *paroisse* may be from the same source.] 1. The precinct or territorial jurisdiction of a secular priest, or a circuit of ground or district inhabited by people who belong to one church, and are under the particular charge of its minister. In the earliest ages of the church, the name *parish* was applied to the district placed under the superintendence of the bishop, and was equivalent to the diocese. Parishes were originally ecclesiastical divisions, but they now come under the class of civil divisions. In England, their limits cannot be altered but by legislative enactment; and in Scotland it requires the authority of the Court of Session, together with the consent of three-fourths of the heritors, to erect new churches and to disjoin parishes. Towns originally contained but one parish, but from the increase of inhabitants, many of them are now divided into several parishes. The number of parishes and parochial chapelries in England and Wales is estimated about 10,700. In Scotland, the number of parishes recognised by law is 948.—*A quoad sacra parish*, is one of a purely ecclesiastical nature, over which a pastor is appointed. Such divisions have been found necessary in large towns, and extensive or densely peopled rural parishes, for supplying more effectually the spiritual wants of the inhabitants.—2. In some of the American states, *parish* is an ecclesiastical society not bounded by territorial limits; but the inhabitants of a town belonging to one church, though residing promiscuously among the people belonging to another church, are called a *parish*. This is particularly the case in Massachusetts. In Connecticut, the legal appellation of such a society is ecclesiastical society.

To constitute a park three things are required; a royal grant or license; inclosure by pales, a wall, or hedge; and beasts of chase, as deer, &c. In common acceptation, a considerable extent of pasture and woodland surrounding or adjoining the country residence of a man of wealth, devoted to purposes of recreation or enjoyment, but chiefly to the support of a herd of deer, though sometimes to cattle and sheep. In Scotland, any inclosure of considerable extent, whether by means of stone walls or fences, used as grazing ground for domesticated animals, for corn or grass crops, is termed a *park*.—*Park of artillery* or *artillery park*, a place in the rear of both lines of an army for encamping the artillery, which is formed in lines, the guns in front, the ammunition-waggons behind the guns, and the pontoons and tumbrils forming the third line. The house of lords includes lords *spiritual* and *temporal;* the former being archbishops and bishops; the latter dukes or princes of the blood royal, other dukes, marquesses, earls, viscounts, and barons—all being "peers of the United Kingdom;" to these were added, by treaties of union with Scotland in 1707, and Ireland in 1800, 16 Scotch and 28 Irish *representative* peers: these are chosen by the general nobility in each country—the Scotch representative peers for each successive parliament, the Irish representative peers for life. The *House of Commons* consists of 658 members, viz., England and Wales, 159 knights of shires, 341 citizens and burgesses; Scotland, 30 knights of shires, 23 citizens and burgesses; Ireland, 64 knights of shires, 41 citizens and burgesses. [L. *patior*, whence *passion*,] to happen or come to pass; *pasear*, to walk; *paseo*, a walking; a gait; *paso*, a *pace*, a step, gait, [Gr. πατεω,] It. *passare*, to pass; *passo*, a pace, a step; *passabile*, tolerable; *passabile*, suffering. Letters patent are obtained upon petition and affidavit to the crown, setting forth that the petitioner has, after great labour and expense, made a certain discovery which he describes, and which he believes will be of great public utility, and that he is the first inventor. The petition is referred to the attorney or solicitor general, who is separately attended by the applicant and all competitors, if there be any. They explain their projects to him, and he decides on granting or withholding the patent. When the inventions of two or more conflicting applicants coincide, he rejects all the applications. When the legal officers of the crown decide in favour of the applicant, the grant is made out, sealed, and enrolled. In order to secure the benefit of a patent, the inventor must, by an instrument under his hand and seal, denominated a specification, *particularly describe* and ascertain the nature of his invention, and in what manner the same is to be performed, and also cause the same to be enrolled in chancery, within a certain time (generally a month). The novelty and utility of the invention are essential to the validity of a patent; if it can be shown to have been in use previously to the grant of the patent, or to be of no utility, it will be void. It must also be for something vendible—something material and useful made by the hands of man. Separate patents have to be taken out for England, Scotland, and Ireland, if it be intended to secure the privilege in the three kingdoms. drical or cylindroidal arches, as *a a a*, the vaults *b b* are formed, which are pendentives. In Gothic architecture, the portion of a groined ceiling springing from one pillar or impost, and bounded by the apices of the longitudinal and transverse vaults, is called a pendentive.

PEND'ULUM, *n.* [L. *pendulus*, *pendulum*.] A vibrating body suspended from a fixed point; as, the *pendulum* of a clock.—In *mech.*, any heavy body so suspended that it may vibrate about some fixed point by the action of gravity. The vibrations of a pendulum are called its *oscillations*; the time of each being counted from the time of

The point A, about which the pendulum A B moves, is called the *point of suspension* or *centre of motion*, the line C D, parallel to the horizon, is the *axis of oscillation*, and the arc B B B is called the *arc of vibration*. Pendulums receive different denominations, according to the materials of which they are composed, or the purposes they are intended to answer. A single weight attached by a string, &c., is called a *simple* pendulum; but the common pendulum consists of a rod of metal or of wood, suspended so as to move freely about the point of suspension, and having a flat circular piece of brass or other heavy material attached to its lower end. The rod of the common pendulum, however, is subject to variations in length in consequence of changes of temperature, and as the accuracy of the pendulum considered as a regulating power depends upon its always maintaining the same length, various contrivances, under the name of *compensation pendulums*, have been adopted, in order to counteract the effects of changes of temperature. These take particular names, according to their forms and materials, as the *gridiron pendulum*, the *mercurial pendulum*, the *lever pendulum*, &c. The gridiron pendulum is composed of any odd number of rods, so connected that the expansion or contraction of the one set of them is counteracted by that of the other. The mercurial pendulum consists of one rod with a vessel containing mercury at the lower end, so adjusted in quantity that whatever alterations take place in the length of the pendulum, the centre of oscillation

remains the same, the mercury ascending when the rod descends, and *vice versâ*. The pendulum is of great importance as the regulating power of clocks. Our clocks are nothing more than pendulums, with wheel work attached to register the number of vibrations, and with a weight or spring having force enough to counteract the retarding effects of friction and the resistance of the air; and when the pendulum is so adjusted as to beat or vibrate $60 \times 60 = 3600$ in an hour, it is called a *seconds pendulum*. The length of such a pendulum in the latitude of London, and at the level of the sea, is 39⅛ inches nearly, or more accurately 39.1393 inches; but as the force of gravity diminishes towards the equator, and increases towards the poles, owing to the figure of the earth, the seconds pendulum must be shortened in lower latitudes, and lengthened in higher. The length of a pendulum is the distance between the point of suspension and the centre

of oscillation. [*See* OSCILLATION.] Besides its use as a regulator of clocks, the pendulum is applied to determine the relative force of gravity at different places, and also to determine the exact figure of the earth.

pepper plant, or pepper vine, a creeping plant, cultivated extensively in India, Siam, the Eastern islands, &c. It requires the support of other trees, to which it readily adheres. The fruit grows abundantly from all the branches in long small clusters of from twenty to fifty grains; when ripe it is of a bright red colour, but becomes nearly black when dried. The black pepper of Malabar is usually reckoned the best. *White pepper* is made by blanching the finest grains of the common black pepper, and freeing them from the outer rind. It is milder than the other, but it is not much used in this country. The cubebs of the shops is the produce of *P. cubeba*, and *caninum*. PER, a Latin preposition, denoting through, by, for, on, passing, or over the whole extent, as in *perambulo*. Hence it is sometimes equivalent to *very* in English, as in *peracutus*, very sharp. As a prefix, in English, it retains these significations, and often amplifies the meaning of *through* into *thoroughly*, or *completely*. Thus, in *chem.*, a *peroxide* is a substance containing an unusual or *thorough* quantity of oxygen, a *maximum* of oxygen; as distinguished from *protoxide*, or a substance combined with oxygen in the first degree. *Per* is used separately for *by;* as *per* bearer, *by* the bearer; and also to signify *for each;* as, a shilling *per* day, a shilling for each day. *Per se, by* himself or *by* itself. We say, the roughness of cloth is *perceivable;* the dawn of the morning is *perceivable;* the sound of a bell is *perceivable;* the scent of an orange is *perceivable;* the difference of taste in an apple and an orange is *perceivable*.—2. PERCEIVE, *v. t.* [L. *percipio; per* and *capio*, to take.] 1. To have knowledge or receive impressions of external objects through the medium or instrumentality of the senses or bodily organs; as, to *perceive* light or colour; to *perceive* the cold of ice or the taste of honey. It is possible to have the impressions of external objects, without the cognizance of them, as in the case of first infancy, before any knowledge has been gained. In this case it would be wrong to say the objects are *perceived*.—2. To know; to understand; to observe.

Till we ourselves see it with our own eyes, and *perceive* it by our own understanding, we are in the dark. *Locke.*

When we review in the mind the knowledge and impressions of absent objects of sense, we are properly said to *conceive*, but in the case of truths or facts presented to the understanding, and received into the mind without the intervention of the senses, the best usage sanctions the employment of *to perceive;* as, "I *perceive* your meaning," "he *perceives* his mistake."—3. To be affected by; to receive impressions from.

The upper regions of the air *perceive* the collection of the matter of tempests before the air below. *Bacon.*

PERCEPTIBIL'ITY, *n.* The state or quality of being perceptible; as, the *perceptibility* of light or colour.—2 Perception. [*Less proper.*]

PERCEP'TION, *n.* [L. *perceptio*. *See* PERCEIVE.] 1. The act of perceiving or of receiving impressions by the senses; or that act or process of the mind which makes known an external object. In other words, the notice which the mind takes of external objects. We gain a knowledge of the coldness and smoothness of marble by *perception*.—2. In *philosophy*, the faculty of perceiving; the faculty or peculiar part of man's constitution, by which he has knowledge through the medium or instrumentality of the bodily organs, or by which he holds communication with the external world. It is distinguished from *conception* by the circumstance that its objects are in every instance supposed to have an actual existence. We may *conceive* things that have no reality, but we are never said to *perceive* such things. Perception differs from *consciousness* in that it takes cognizance only of objects without the mind. We *perceive* a man, a horse, a tree; when we think or feel, we are conscious of our thoughts and emotions. It is further supposed in *perception* that the objects of it are present. We can *remember* former objects of perception, but we do not perceive them again until they are once more present. The term *perception*, however, is sometimes analogically employed in common speech in reference to truths, the evidence of which is certain. Thus we may *perceive* the truth of a mathematical proposition. [*See* PERCEIVE.] Various theories of perception have arisen among philosophers. These have been designated by the terms *idealism* and *realism*.—3. Notion; idea.—4. The state of being affected or capable of being affected by something external.

This experiment discovers *perception* in plants. *Bacon.*

If n represent the number of quantities, then the number of permutations that can be formed out of them, taken two by two together, is $n \times (n-1)$; taken three and three together, is $n \times (n-1) \times (n-2)$, and so on. [*See* COMBINATION.]

5. During the legal dispensation; Ex. xxix.—*Perpetual curacy*, is where all the tithes are appropriated and no vicarage is endowed.—*Perpetual motion*, motion that generates a power of continuing itself for ever or indefinitely, by means of mechanism or some application of the force of gravity, not yet discovered. The celebrated problem of a perpetual motion consists in the inventing of a machine which shall have the principles of its motion within itself, and numberless schemes have been proposed for its solution; but unless friction and the resistance of the air, which necessarily retard, and finally stop the motions of machines, could be removed, a perpetual motion must be impossible from any pure mechanical combination. The problem, when strictly investigated, amounts to this, namely, to find a body which is both heavier, and lighter at the same time, or to find a body which is heavier than itself. In speaking of the perpetual motion, it is to be understood that from among the forces by which motion may be produced, we are to exclude not only air and water, but other natural agents, as heat, atmospheric changes, &c. The only admissible agents are, the inertia of matter, and its attractive forces, which may all be considered of the same kind as gravitation. The planets in their orbits, and in their rotations on their axes, furnish instances of perpetual motion.—*Perpetual screw*, a screw

In *law*, a party who has an interest in property, but not such an interest as enables him immediately to prosecute his claim; or a party who is in possession of property, and fears that his right may at some future time be disputed, is entitled to examine witnesses in order to preserve that testimony which may be lost by the death of such witnesses before he can prosecute his claim, or before he is called on to defend his right. This is effected by such party filing a bill in equity against such persons as are interested in disputing his claim; in which bill he prays that the testimony of his witnesses may be *perpetuated*; that is, that their depositions may be taken and preserved until such time as they may be required to be used as evidence in his favour.

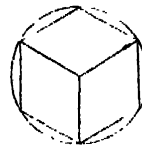
Personal property is said to be either *in possession* or *in action*. PERSPEC'TIVE, *n.* [Fr.; It. *perspettiva; Sp. perspectiva;* from L. *perspicio; per* and *specio*, to see.] 1. A glass through which objects are viewed. —2. The science which teaches the representation of an object or objects on a definite surface so as to affect the eye when viewed from a given point, in the same manner as the object or objects themselves. Correctly defined, a perspective delineation is a section, by the plane or other surface, on which the delineation is made, of the cone of rays proceeding from every part of the object to the eye of the spectator. It is intimately connected with the arts of design, and is indispensable in architecture, engineering, fortification, sculpture, and generally all the mechanical arts; but it is particularly necessary in the art of painting, as without a correct observance of the rules of perspective no picture can have truth and life. Perspective alone enables us to represent foreshortenings with accuracy, and it is requisite in delineating even the simplest positions of objects.—Perspective is divided into two branches, *linear*, and *aerial. Linear perspective* has reference to the position, form, magnitude, &c. of the several lines or contours of objects, &c. The outlines of such objects as buildings, machinery, and most works of human labour which consist of geometrical forms, or which can be reduced to them, may be most accurately obtained by the rules of linear perspective, since the intersection with an interposed plane of the rays of light proceeding from every point of such objects may be obtained by the principles of geometry.



Oblique Perspective.

Parallel Perspective.

Linear perspective includes the various kinds of projections; as, *scenographic, orthographic, ichnographic, stereographic* projections, &c. *Aerial perspective* teaches how to give due diminution to the strength of light, shade, and colours of objects according to their distances, and the quantity of light falling on them, and to the medium through which they are seen.—*Perspective plane*, the surface on which the object or picture is delineated, or it is the transparent surface or plane through which we suppose objects to be viewed; it is also termed the *plane of projection*, and the plane of the picture.—*Parallel perspective* is where the picture is supposed to be so situated, as to be parallel to the side of the principal object in the picture; as a building, for instance.—*Oblique perspective*, is when the plane of the picture is supposed to stand oblique to the sides of the object represented; in which case the representations of the lines upon those sides will not be parallel among themselves, but will tend towards their vanishing point. Other terms employed in perspective, as *ground plane, horizontal plane, parallel plane*, &c., and lines and points connected with these, must be sought for in their proper places.— 3. A representation of objects in perspective.—4. View; vista; as, *perspectives* of pleasant shades.—5. A kind of painting, often seen in gardens and at the end of a gallery, designed expressly to deceive the sight by representing the continuation of an alley, a building, a landscape or the like.—*Isometrical perspective*, a kind of perspective on the principles of orthographic projection, invented by Professor Farish of Cambridge, by which solids, of the form of rectangular parallelopipeds, or such as are reducible to this form,

can be represented with their three pair of planes in one figure, which gives a more intelligible idea of their form than can be done by a separate plan and elevation. At the same time, this method admits of their dimensions being measured by a scale as directly as by the usual mode of delineation. As applied to machinery it gives the elevation and ground plan in one view.

Isometrical Perspective.

It is considered, for such purposes, to be preferable to the methods in common use, as it is easier and simpler in its application.

It is divided into *insensible* and *sensible*, the former being separated in the form of an invisible vapour; the latter so as to become visible by condensation, in the form of very little drops adhering to the skin. According to Lavoisier and Seguin, the greatest amount of insensible perspiration (the pulmonary included) exceeds six pounds in the twenty-four hours, and the smallest, two pounds; it is at its maximum immediately after taking food, and decreases during digestion. Insensible perspiration is not visible to the naked eye; its uses are, 1. to liberate the blood from superfluous animal gas, nitrogen, and water; 2. to eliminate the noxious and heterogeneous excrements; 3. to moisten the external surface of the body, lest the epidermis and its nervous papillæ be dried up by the atmospheric air; and, 4. to counterbalance the suppressed pulmonary transpiration of the lungs. O polished *perturbation*, golden care! *Shak.*

Perturbations of the planets, in *astr.*, their deviations from their regular elliptic course, produced by their mutual gravitations. These deviations arise, in the case of the primary planets, from the mutual gravitations of these planets towards each other, which derange their elliptic motions round the sun; and in that of the secondaries, partly from the mutual gravitation of the secondaries of the same system, similarly deranging their elliptic motions round their primary, and partly from the unequal attraction of the sun on them and on their primary. The forces which cause these perturbations or deviations are called the *perturbing* forces, and the determination of their effect on each orbit is the great problem of physical astronomy. The planets are subject to two kinds of perturbations; one kind, depending upon their positions with regard to each other, begins from zero, increases to a maximum, decreases, and becomes zero again when the planets return to the same relative positions. All these changes being accomplished in comparatively short periods, are denominated *periodic inequalities*. The inequalities of the other kind are entirely independent of the relative positions of the planets. They depend upon the relative positions of the orbits alone, whose forms and places in space are thus altered by very minute quantities in immense periods of time, and are therefore called secular inequalities. It is found that the inequalities or perturbations of the planetary motions, both periodic and secular, are all compensated in the long-run; and that, consequently, the planetary system contains within itself no element of destruction, but is calculated to endure for ever, unless an external force be introduced. Of the planetary perturbations, the most important in a practical point of view are those which arise from the mutual attractions of the three bodies, the sun, the earth, and the moon.

PHILOS'OPHY, *n.* [L. *philosophia;* Gr. φιλοσοφια: φιλια, love; φιλεω, to love, and σοφια, wisdom.] 1. Literally, the love of wisdom. But in modern acceptation, *philosophy* is a general term denoting an explanation of the reasons of things; or an investigation of the causes of all phenomena both of mind and of matter. When applied to any particular department of knowledge, it denotes the collection of general laws or principles under which all the subordinate phenomena or facts relating to that subject are comprehended. Thus, that branch of *philosophy* which treats of God, &c. is called *theology;* that which treats of nature is called *physics* or *natural philosophy;* that which treats of man is called *logic* and *ethics*, or *moral philosophy;* that which treats of the mind is called *intellectual* or *mental philosophy*, or *metaphysics.* The term *philosophy* is often used, apparently with no great precision, though it is not difficult to deduce from the use of this term the general meaning or notion which is attached to it. We speak of the philosophy of the human mind as being of all philosophies that to which the name philosophy is particularly appropriated; and when the term philosophy is used absolutely, this seems to be the philosophy that is spoken of. Other philosophies are referred to their several objects by qualifying terms: thus we speak of natural philosophy, meaning thereby the philosophy of nature, or of material objects. We also speak of the philosophy of positive law, understanding thereby the philosophy of those binding rules, properly called laws. The terms philosophy of history, philosophy of manufactures, and other such terms are also used. All objects then which can occupy the mind may have something in common, called their philosophy; which philosophy is nothing else than the general expression for that effort of the mind whereby it strives, pursuant to its laws, to reduce its knowledge to the form of ultimate truths or principles, and to determine the immutable relations which exist between things as it conceives them. The philosophy which comprises within itself all philosophies is that which labours to determine the laws or ultimate principles in obedience to which the mind itself operates. Thus every kind of knowledge the objects of which are things external, has its philosophy or principles, which, when discovered and systematised form the science of the things to which they severally belong. But we must assume that the mind also has its laws and powers which may be discovered by observation, as we discover by observation the laws or principles which govern the relations of things external to the mind, or conceived as external. Accordingly the human mind, by the necessity imprinted on it, seeks to discover the ultimate foundation of all that it knows or conceives; to discover what itself is, and what is its relation to all things, and so it strives to form a system out of all such ultimate laws or principles. Such a system may be called a philosophy in the proper and absolute sense of the term, and the attempt to form such a system is to philosophize. Systems of philosophy have existed in all nations. The Greeks and Romans had various systems; as the Pythagorean, Aristotelian, Socratic, Platonic, Epicurean, Stoic, and Cynic philosophies. The objects of philosophy are to ascertain facts or truth, and the causes of things or their phenomena; to enlarge our views of God and his works, and to render our knowledge of both practically useful and subservient to human happiness.

> True religion and true *philosophy* must ultimately arrive at the same principle. *S. S. Smith.*

This system professes to be a new and philosophic method of expressing sounds by fixed and definite signs or characters, and so framed that every sound of the human voice is represented with unerring accuracy, and the most distinct legibility, and any person who once knows the characters can decipher what is thus written with great facility. In this system there is consequently no disparity between the spelling and pronunciation of words as in the present system. It may be regarded as a scientific species of stenography, peculiarly adapted to verbatim reporting.

It consists in a rectified orthography of the English language, founded on the principle of making each letter or character the unvarying representation of one sound. It employs the letters of the English alphabet in such a way that each is always made the

representative of one and the same sound, and to represent the other sounds of these letters new characters are introduced. Thus, the letter *A* instead of being used to represent four different sounds, is only made to represent the open sound as in *Sam*, the other sounds being represented by new characters. The common letters thus used, together with the new characters, form what is termed the *phonotypic alphabet*, and the types employed in accordance with this new method of printing are called *phonotypes*. [*See* PHONOGRAPHY.]

It is exhibited by certain animals, as well as by vegetable and mineral substances, or the emission of light by substances at common temperatures, or below a red heat.—*Phosphorescence of the sea*, a luminous appearance of sea water, arising from the presence of immense numbers of microscopic medusæ, which people every region of the ocean, and being specifically lighter than the sea water, float on its surface.

PHOSPHORES'CENT, *a.* Shining with a faint light; luminous without sensible heat. Various animals are phosphorescent; as the glow-worm, the phosphorescent sea-pen (*pennatula phosphorea*), and the brilliant pyrosome. Fish also possess this property in a remarkable degree. A number of mineral substances exhibit the same property; as, chloride of calcium, anhydrous nitrate of lime, some carbonates and sulphates of baryta, strontia, and lime, the diamond, some varieties of fluor-spar, apatite, borax, and many other substances Some mineral bodies become phosphorescent when strongly heated; as a piece of lime. The same property is observable in decayed wood.

PHOSPHORES'CING, *ppr.* Exhibiting light without sensible heat.

PHOS'PHORIC, *a.* Pertaining to or obtained from phosphorus. The phosphoric acid is formed by a combination of phosphorus with oxygen to saturation. It has hitherto been obtained only in combination with water or some alkaline base. It exists largely in nature, in combination with lime, forming bones, also in some vegetable products, and often in the bowels of the earth, combined with lime, forming the mineral called apatite. One of the best modes of obtaining it, is to oxidize phosphorus by strong nitric acid, but it may be prepared at a much cheaper rate from bones. Phosphoric acid is colourless, intensely sour to the taste, reddens litmus strongly, and neutralizes alkalies. It is composed of two and a half equivalents of oxygen and one of phosphorus. It is remarkable for its tendency to unite with alkaline bases, in such proportions that the oxygen of the base and of the acid are to each other as 3 to 5. It is used in medicine in the form of solution, constituting the dilute acid of the Pharmacopœia. It is peculiarly suited to disordered states of the mucous surfaces, and also to states of debility, characterized by softening of the bones.

PHOS'PHORUS, } *n.* [L. from the
PHOS'PHOR, } Greek. *See* PHOSPHOR.] 1. The morning star.—2. *Phosphorus*, in *chem.*, a solid non-metallic combustible substance, hitherto undecomposed. It was originally obtained from *urine*; but it is now manufactured from *bones*, which consist in part of phosphate of lime. When pure it is almost transparent and colourless. At common temperatures it is a soft solid of specific gravity 1.77, is easily cut with a knife, and the cut surface has a waxy lustre; at 108° it fuses, and at 550° is converted into vapour. It is soluble, by the aid of heat, in naphtha, in fixed and volatile oils, in the chloride of sulphur, sulphuret of carbon, and sulphuret of phosphorus. It is exceedingly inflammable. Exposed to the air at common temperatures, it undergoes slow combustion, emits a white vapour of a peculiar alliaceous odour, appears luminous in the dark, and is gradually consumed. On this account phosphorus should always be kept under water. A very slight degree of heat is sufficient to inflame phosphorus in the open air. Gentle pressure between the fingers, friction, or a temperature not much above its point of fusion, kindles it readily. It burns rapidly even in the air, emitting a splendid white light, and causing intense heat. Its combustion is far more rapid in oxygen gas, and the light far more vivid. The product of the perfect combustion of phosphorus is phosphoric acid,—*which see*. Phosphorus may be made to combine with most of the metals, forming compounds called *phosphurets*; when dissolved in fat oils, it forms a solution which is luminous in the dark. It is used in the preparation of fire-matches, and also in the preparation of phosphoric acid. It is of all stimulants the most powerful and diffusible, but on account of its activity, highly dangerous. It can be safely administered as a medicine, only in extremely minute doses, and with the utmost possible caution.

The gas which arises is spontaneously inflammable; and during its combustion there are formed water and phosphoric acid. It is colourless, and has a disagreeable smell resembling that of onions. When mixed with air or oxygen gas, it explodes at a temperature of 300°. It is produced by the decomposition of animal substances.

Photometers.

having one of its balls diaphanous, and the other coated with china ink, or blown of deep black enamel; the whole covered by a case of thin transparent glass. It has two general forms, as represented in the figures; the one (fig. 1.) being portable, and the other (fig. 2.) being stationary. The theory of this photometer depends on the assumed principle that the intensity of light is proportional to the heat excited by its incidence on the black ball. When the instrument is exposed to light, the rays which fall on the clear ball pass through it without suffering obstruction; but those which strike the dark ball are stopped and absorbed at its surface, where, assuming a latent form, they act as heat, which by expanding the air within the ball, causes the liquid in the stem to descend. This heat will continue to accumulate till its farther increase comes to be counteracted by an opposite dispersion, when the liquid will become stationary, and the space through which it sinks in the stem, will measure the intensity of the light. Strictly speaking, however, this instrument may be regarded as a measurer of heat, rather than of light.

It is tall, with annual stems, and a perennial root, found exclusively in places overflowed even during summer. It occurs all through Europe in such localities, and is common in Siberia, Japan, North America, and New Holland, forming thick coverts, and yielding an abundance of strong durable grass, of great value for thatching roofs.

PHRENOL'OGY, *n.* [Gr. φρην, the mind, and λογος, discourse.] The science of the human mind and its various properties. The term *phrenology* has been recently applied to denote a new doctrine of mental philosophy, founded on a presumed knowledge of the functions of different portions of the brain, obtained by comparing their relative forms and magnitudes in different individuals, with the propensities and intellectual powers which these individuals are found respectively to possess. The original propounder of the doctrine, which is the basis of phrenology, was Dr. Gall, a physician of Vienna, and the science was matured by him in conjunction with Dr. Spurzheim, the latter contributing most to its advancement and enlargement. Dr. Spurzheim, who is followed by Dr. Combe, divides our faculties into three classes: the intellectual or perceptive, the sentiments or emotions, and the animal propensities. To the first of these is assigned the anterior portion of the head; the second occupies the middle and upper; while the posterior region, and cerebellum, are allowed to the third and most inglorious division. Each of these divisions is subdivided into minute special organs corresponding to distinct faculties. Thus, according to this science, the manifestation of each of the several faculties of the mind depends on a particular part of the brain, and *cæteris paribus*, the degree or strength in which each faculty is manifested in each individual, depends on the size or development of its appropriated portion of the brain, or its organ. In the subjoined figures the different organs (most of them double) are marked out, and numbered, according to the system of Spurzheim. The faculties generally recognized by phrenologists are the following. The numbers refer to the figures.

Order I. *Feelings. Genus* I. *Propensities—common to man with the lower animals.* The love of-life; appetite for food. 1. Amativeness. 2. Philo-

A *physical* point is a real point, in distinction from a mathematical or imaginary point. A *physical* body or substance is a material body or substance, in distinction from spirit or metaphysical substance —*Physical science,* the science of nature, or natural philosophy. [*See* PHYSICS.] 2. External; perceptible to the senses; as, the *physical* characters of a mineral; opposed to *chemical.*—3. Relating to the art of healing; as, a *physical* treatise.—4. PHYS'ICS, *n.* (*s* as *z.*) In *its most extensive sense,* the science of nature or of natural objects, comprehending the study or knowledge of whatever exists. —In *modern lan.,* however, the term has a less general signification than its derivation implies. As nature signifies the assemblage of all the bodies in the universe, the *science of nature* comprehends every species of knowledge which regards the external world. But bodies may be studied under three different points of view, they may be examined with relation to their general properties, with relation to their constituent parts and peculiar properties, and with relation to their appearances and exterior qualities. These three relations give rise to the three great divisions of natural science, namely, *physics* (sometimes called *natural philosophy*), *chemistry,* and *natural history.* Physics has for its object the general properties of bodies, their mutual actions on each other, their causes, effects, phenomena, and laws. Chemistry studies the peculiar properties of bodies, their elementary principles, and combinations; and natural history observes their external characters and appearances, classifies and arranges them.

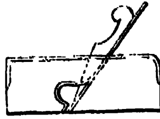
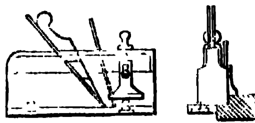
Its root acts as a powerful emetic, but its exhibition is attended with narcotic effects. Its berries are said to possess the same quality; they are employed as a remedy for chronic and syphilitic rheumatism, and for allaying syphiloid pains. In the first instance, the piles are from 9 to 18 inches in diameter, and about 20 times their diameter in length. They are pointed with iron at their lower end, and their head is encircled with an iron ring to prevent its being split by the blows of the pile-driver. The primary sense of the verb is to extend.] 1. A draught or form; properly, the representation of any thing drawn on a *plane*, as a map or chart, which is a representation of some portion of land or water. But the word is usually applied to the horizontal geometrical section of a building, such as it appears or is intended to appear on the ground, showing the extent, division, and distribution of its area or ground plot into apartments, rooms, passages, &c. The *raised plan* of a building is the same with what is otherwise called an *elevation* or *orthography.* A *geometrical plan*, is that wherein the solid or vacant parts are represented in their natural proportions. A *perspective plan* is that exhibited by degradations or diminutions, according to the rules of that science. The term plan may be applied to the draught or representation of any projected work on paper or on a plain surface; as, the *plan* of a town or city, or of a harbour or fort. The form of a machine in miniature is called a *model.*—2. PLANE, *n.* [from L. *planus.* *See* PLAIN.] 1. In *geom.*, an even or level surface, a surface without curvature; or it is a surface such that if any two points whatever in it be joined by a straight line, the whole of the straight line will be in the surface. The term *plane* is frequently employed to express an ideal surface, supposed to cut and pass through solid bodies, or other surfaces, in various directions. *Planes*, as to their situation, are either *vertical*, or at right angles to the horizon; *horizontal*, or parallel to the horizon; or *inclined;* that is, inclined to the horizon, or making any angle with it less than a right angle.—*Plane figure.* [*See* PLAIN.]—*Plane geometry*, the geometry of plane figures in contradistinction to

[*See* TRIGONOMETRY.]—*Plane problem*, in *geom.*, a problem which can be solved by the intersections of right lines and circles, without the aid of conic sections, or any of the higher curves. A *plane angle*, one contained under two lines or surfaces, in contradistinction to a solid angle. [*See* ANGLE.]—*Planes* in *mech.*, are either horizontal, or inclined to the horizon. [*See* INCLINED PLANE.]—*Perspective plane*, in *perspective* a vertical plane supposed to be transparent. —*Horizontal plane*, a plane supposed to pass through the spectator's eye parallel to the horizon.—*Objective plane*, any plane, side, or face of an original object to be delineated on the perspective plane.—*Geometrical plane*, a plane likewise parallel to the horizon, wherein the object to be represented is supposed to be placed.—*Plane of projection*, in the stereographic projection of the sphere, is that on which the projection is made, corresponding to the perspective plane.—*Plane sailing*, in *navigation*, the art of determining the ship's place, on the supposition that she is moving on a plane, or that the surface of the ocean is plane, instead of being spherical. This supposition may be adopted for short distances without leading to great errors; and it affords great facilities in calculation, for the place of the ship is found by the solution of a right-angled plane triangle. In plane sailing the principal terms made use of are, the course, distance, departure, and difference of latitude, any two of which being given, the others can be found.—2. In *astr.*, an imaginary surface supposed to pass through any of the curves described on the celestial sphere; as the *plane* of the ecliptic; the *plane* of a planet's orbit; the *plane* of a great circle.—3. In *joinery* and *cabinet work*, an instrument consisting of a smooth piece of wood, with an aperture, through which passes obliquely a piece of edged steel or chisel, used in paring or smoothing boards or wood of any kind; or for producing thereon a flat even surface. There are various sorts of planes; as, the *jackplane* (about 17 in.



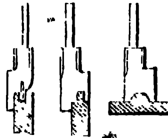
Jack Plane.

long), used for taking off the roughest and most prominent parts of the stuff; the *trying plane*, which is used after the jack-plane; the *long plane* (26 in. long), used when a piece of stuff is to be planed very straight; the *jointer*, still longer than the former, which is used for obtaining very straight edges; the *smoothing plane* (7½ in. long), and *block-plane* (12 in. long), chiefly used for cleaning off finished work, and



Smoothing. Compass.

giving the utmost degree of smoothness to the surface of the wood; the *compass plane*, which is similar to the smoothing plane, but has its under surface convex, its use being to form a concave cylindrical surface. The foregoing are technically called *bench planes*. There is also a species of planes called *rebate planes*, the first of



Rebate.

which is simply called the *rebate plane*, being chiefly used for making rebates. Of the sinking rebating planes there are two sorts, the *moving fillister* and the *sash fillister*, the first for sinking

Fillister, side and end.

the edge of the stuff next the workman, and the second for sinking the opposite edge. The *plough* is a plane for sinking a channel or groove, in a surface not close to the edge of it. *Moulding planes* are for forming

Plough Moulding.

mouldings, and must vary according to the design. The *bead plane* is used for mouldings whose section is semicircular. Planes are also used for smoothing metal, and are wrought by machinery. [*See* PLANING MACHINE.]

The planets which revolve about the sun as their centre, are called *primary* planets; those which revolve about other planets as their centre, and with them revolve about the sun, are called *secondary* planets, satellites, or moons. The primary planets are named Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, and Neptune, discovered 1846. Four smaller planets, denominated by some, *asteroids*, namely, Ceres, Pallas, Juno, and Vesta, have since been discovered between the orbits of Mars and Jupiter, and recently the planet Astræa. Mars, Jupiter, Saturn, Uranus, and Neptune being without the earth's orbit, are sometimes called the *superior* planets; Venus and Mercury, being within the earth's orbit, are called *inferior* planets. The planets are opaque bodies which receive their light from the sun. They are so named from their *motion* or *revolution* in distinction from the *fixed stars*, and are distinguished from the latter by their not twinkling. [*See* STAR.]

PLĀNE-TABLE, *n.* An instrument employed in land-surveying, by means of which a plan is made on the spot without any protraction or measurement of angles. It consists of a plane rectangular board, about sixteen inches square, which may be fixed on a three-legged stand, or staff head. It has a compass box with a magnetic needle screwed on one side to indicate the bearings.

The seeds are downy, and collected into

Plane-tree (Platanus occidentalis).

round, rough, hard balls. It is the handsomest of all the hardy deciduous trees in cultivation, and is perfectly suited to the climate of England. Its

timber is fine-grained, hard, and well suited to such kinds of joiner's work as do not require strength, for which its brittleness renders it unsuitable. The occidental plane-tree, which grows to a great height, is a native of North America; it is called also *button-wood* and *button-tree*. This is the species usually planted in England, to the climate of which it is, however, ill suited. Both species have the singular property of throwing off their old bark, in hard plates of irregular size and form. [*See* PLATANACEÆ.]

PLANIMET'RICAL, } the mensuration of plain surfaces.

PLANIM'ETRY, *n.* [L. *planus*, plain, and Gr. *μετρεω*, to measure.] The mensuration of plain surfaces, or that part of geometry which regards lines and plain figures, without considering their height or depth.

PLANING MACHINE, *n.* In *mech.*, a tool or instrument wrought by steam power, by which engineers are enabled materially to abridge manual labour in producing a perfectly plane surface upon a piece of metal. This is usually accomplished by such an arrangement of mechanism, as will cause the object which is to be operated upon to traverse backwards and forwards upon a perfectly smooth and level bed, while the cutting tool is fixed to a cross slide above it, and slightly penetrates the surface as it is carried along. The tool is acted upon by screws, so as to enable the attendant to adjust the depth of the cut, and to move it with unerring precision over every part of the surface which it is required to plane.

It has, however, been retained to signify any contrivance in which plane surfaces, moving on one another, fulfil any of the uses of a celestial globe.

PLANK, *n.* [Fr. *planche*; W. *planc*; G. and Dan. *planke*; Russ. *placha*, a board or plank. Probably *n* is casual.] A broad piece of sawed timber, differing from a board only in being thicker. Broad pieces of sawed timber which are not more than an inch, or an inch and a quarter thick, are called *boards*; like pieces, from an inch and a half to three or four inches thick, are called *planks*. Sometimes pieces more than four inches thick are called *planks*.

PLANT, *n.* [Fr. *plante*; L. Sp. Port. and Sw. *planta*; Ir. *plannda*; G. *pflanze*; W. *plant*, issue, offspring, children, from *plan*, a ray, a shoot, a plantation or planting, a plane; *planed*, a shooting body, a *planet*; *pleiniaw*, to radiate; *plenig*, radiant, *splendid*; *plent*, that is rayed; *plentyn*, a child; *planta*, to beget or to bear children. In It. Sp. and Port. *planta* signifies a *plant* and a *plan*. Here we find *plan*, *plane*, *plant*, *planet*, all from one stock, and the Welsh *pleiniaw*, to radiate, shows that the L. *splendeo*, *splendor*, are of the same family. The Celtic *clan* is probably the Welsh *plan*, *plant*, with a different prefix. The radical sense is obvious, to shoot, to extend.]—1. A vegetable; an organized living body, destitute of sense and spontaneous motion, adhering to another body in such a manner as to draw from it its nourishment, and having the power of propagating itself by seeds; "whose seed is in itself;" Gen. i. This definition may not be perfectly correct, as it respects all plants, for some aquatic plants grow without being attached to any fixed body. Some plants also seem so nearly allied to some animals, that it is difficult to say where the series of vegetables ends, and that of animals commences. The parts of which a plant is composed are called its *organs*, as the root, the stem, the leaves, and the petals. These organs are composed of elementary parts, so minute as generally to be distinctly visible only with the aid of the microscope: they are named *elementary organs*, *organic tissue*, or *vegetable tissue*. The organs properly so called are physiologically divided into two kinds, namely, *nutritive* or *conservative organs*, and *reproductive organs*. The first kind consisting of the root, stem, branches, leaves, and some other parts, are subservient to the development and preservation of the individual, or they are those organs by which the function of nutrition is performed. The reproductive organs, or those destined for the continuation of the species, are the various parts forming the flower and fruit. By the absorption of fluid by the roots of plants, a mass of nutritious matter is gradually accumulated in the stem and branches. This fluid passing into the leaves is there subjected to a process by which part of the water is discharged, the remaining part subjected to the action of the atmosphere; carbonic acid is generated, and then decomposed by the action of light; carbon is fixed in the form of a nutritive material, which is carried into the system; a farther elaboration of this material takes place, after which it is applied to the development of all the organs; while, by certain changes, it is also converted into various matters, which are either retained or ejected. The stems and branches, with the leaves and stipules, are gradually developed; the flowers make their appearance, and unfold their parts; the anthers shed their pollen, the application of which to the stigma is followed by the development of the ovules; the fruit is at length matured, and drops to the ground, where the seeds, under favourable circumstances, become developed into new individuals. [*See* NUTRITION.] The woody or dicotyledonous plants, or exogens, consist of three parts; the bark or exterior coat, which covers the wood; the wood, which is hard and constitutes the principal part; and the pith or centre of the stem. In monocotyledonous plants, or endogens, the ligneous or fibrous parts, and the pithy or parenchymatous, are equally distributed through the whole internal substance; and in acotyledonous plants, as funguses, sea-weed, &c., the substance is altogether parenchymatous. By means of proper vessels, the nourishing juices are distributed to every part of the plant. In its most general sense, *plant* comprehends all vegetables, trees, shrubs, herbs, grasses, &c. In *popular language*, the word is generally applied to the smaller species of vegetables.—2. A sapling.—3. PLAT'INA, PLATI'NA, or **PLATI'NUM**, *n.* [Sp. *platina*, from *plata*, silver.] A metal discovered in 1741, in the mines of Choco in Peru. It was first called Platinum by Linnæus, and that name has been adopted by

nearly all the chemists since his time. It occurs only in the metallic state, associated or combined with various other metals, such as copper, iron, lead, titanium, chromium, gold, silver, palladium, rhodium, osmium, and iridium. It is usually in the form of rounded or flattened grains of a metallic lustre and white colour, mixed with sand and other alluvial depositions. Pure platinum has a white colour very much like silver, but of inferior lustre. It is the heaviest of known metals; its specific gravity, after forging, being about 21.25, and 21.5 in the state of wire. It is exceedingly ductile, malleable, tenacious, and difficult of fusion. It undergoes no change from the combined agency of air and moisture; and it may be exposed to the strongest heat of a smith's forge without suffering oxidation or fusion. It may, however, be melted by voltaic electricity, or by the oxyhydrogen blowpipe. It is a soft metal, and like iron admits of being welded at a high temperature. It is not acted upon by any of the pure acids; it is dissolved by chlorine and nitro-muriatic acid, and is oxidized at high temperatures, by pure potassa and lithia. It is capable of being hammered into plates of extreme thinness, and Dr. Wollaston succeeded in drawing out a wire of this metal to the fineness of $\frac{1}{3000}$th of an inch. Platina is much used for crucibles, evaporating dishes, and even alembics. It unites with most metals.

PLAT'ING, *ppr.* Overlaying with plate or with a metal; beating into thin laminæ.

PLAT'ING, *n.* The art or operation of covering any thing with plate or with a metal, particularly of overlaying a baser metal with a thin plate of silver. It is effected in various ways; sometimes the silver is attached to and rolled out with the other metal by pressure; sometimes the one metal is precipitated from its solution upon the other; and of late electro-chemical decomposition has been employed for this purpose. [*See* ELECTRO-GILDING, ELECTROTYPE.]

It was a fundamental maxim with him that from nothing, nothing can proceed. PLEA, *n.* [Norm. *plait, plet, plaid, ple; plur. pliz, pleytz;* Fr. *plaider*, to plead; *plaidoyer*, a plea; It. *piato*, a plea; *piatire*, to plead; Sp. *pleyto*, dispute; *pleytear*, to plead; *pleyteador*, a pleader; Port. *pleito, pleiteur;* D. *pleit, pleiten.* The Spanish word *pleyto* signifies a dispute, contest, debate, lawsuit, and a covenant, contract, or bargain, and *pleyta* is a *plaited* strand of brass. The Portuguese verb *pleitear* signifies to plead, to go to law, to strive or vie.] 1. In *law*, that which is alleged by a party in support of his demand; but in a more limited and technical sense, the answer of the defendant to the plaintiff's declaration and demand. That which the plaintiff alleges in his declaration is answered and repelled or justified by the defendant's *plea*. Pleas are usually divided into those of the crown and common pleas. Pleas of the crown are all suits in the king's name, or in the name of the attorney-general in behalf of the king, for offences committed against his crown and dignity, and against his peace; as treason, murder, felony, &c. Common pleas are such suits as are carried on between common persons in civil cases: these pleas are of two sorts; *dilatory pleas*, and *pleas to the action. Dilatory* pleas are to the jurisdiction of the court, to the disability of the plaintiff, or in abatement. Pleas *to the action* are an answer to the merits of the complaint, which confesses or denies it. Pleas that deny the plaintiff's complaint or demand, are the general issue, which denies the whole declaration; or special pleas in bar, which state something which precludes the plaintiff's right of recovery.—*Foreign plea*, that whereby matter is produced in one court which may be tried in another. In *Scots law*, a plea is a short and concise note drawn and signed by counsel, of the grounds on which the action or defence is to be maintained, and in such note the matter of law so stated, is set forth in distinct and separate propositions, without argument, but accompanied by a reference to the authorities relied on. In the *court of session*, the pleadings to which pleas in law are subjoined, are defences, revised condescendences, revised answers to condescendences, reasons of suspension, reasons of advocation, condescendences, and claims in multiplepoindings, and the analogous pleadings in the less ordinary processes. A panel's plea, must either be *guilty*, or *not guilty*, but the panel may plead guilty to certain charges and deny the rest, or he may admit the crime and deny the aggravations: thus, to a charge of murder, he may plead *not guilty*, and yet admit the homicide.—2. A cause in court; a lawsuit, or a criminal process; as, the *pleas* of the crown; the court of common *pleas*.—3. That which is alleged in defence or justification; an excuse; an apology; as, the tyrant's *plea*.

In *law*, to present an answer to the declaration of a plaintiff; to deny the plaintiff's declaration and demand, or to allege facts which show that he ought not to recover in the suit. The plaintiff declares or alleges; the defendant *pleads* to his declaration. The crown or the state prosecutes an offender, and the offender *pleads* not guilty, or confesses the charge.—3. To urge reasons for or against; to attempt to persuade one by argument or supplication; as, to *plead* for the life of a criminal; to *plead* in his favour; to *plead* with a judge or with a father.

O that one might *plead* for a man with God, as a man *pleadeth* for his neighbour! Job xvi.

as, to *plead* a cause before a court or jury. In this sense, *argue* is more generally used by lawyers.—2. To allege or adduce in proof, support, or vindication. The law of nations may be *pleaded* in favour of the rights of ambassadors.—3. To offer in excuse.

PLEADING, *n.* The act of supporting by arguments, or of reasoning to persuade. In *law*, the term *pleading*, in *a large sense*, comprehends all the proceedings in a trial or action, from the declaration until the issue is joined [*see* ISSUE]; but in *its immediate or direct sense*, it is taken for the defendant's answer to the declaration. [*See* PLEADINGS.]

PLEADINGS, *n.* In *law*, the mutual altercations between the plaintiff and defendant, or written statements of the parties in support of their claims, comprehending the declaration, count, or narration of the plaintiff, the plea of the defendant in reply, the replication of the plaintiff to the defendant's plea, the defendant's rejoinder, the plaintiff's sur-rejoinder, the defendant's rebutter, the plaintiff's sur-rebutter, &c. till the question is brought to issue, that is, to rest on a single point. When, in the course of these special pleadings, the plaintiff and defendant have agreed upon a point, they are said to be at *issue*, which is often done at the replication or sur-rejoinder, and not so frequently carried through the whole course of pleading.

It consists of a board with parallel edges; a line is drawn down the middle of the board, and to the upper end of this line the end of a string is attached, carrying a piece of lead at its lower end. When the edge of the board is applied to a wall or other upright object, the exact coincidence of the plumb-line with the line marked on the board indicates that the wall or other object is vertical, while the deviation of the plumb-line from that on the board, shows how far the object is from the perpendicular. Sometimes another board is fixed across the lower end of the plumb-rule, having its lower edge at right angles to the line drawn on the other. In this case it becomes a level.

He excels in *poetry.*—3. Poems; poetical composition. We take pleasure in reading *poetry.*—4. This term is also applied to the language of excited imagination and feeling. To produce a complete and satisfactory definition of poetry has been, hitherto, unsuccessfully attempted by writers on taste, and by poets themselves A popular definition sufficiently adapted to general notions is furnished by Lord Jeffrey: —"The end of poetry is to please; and the name, we think, is strictly applicable to every metrical composition from which we derive pleasure, without any laborious exercise of the understanding. But it has been truly observed, that verse is the limit by which poetry is bounded; it is the adjunct of poetry, but not its living principle."—"Poetry," says Coleridge, "is not the proper antithesis to prose, but to science. Poetry is opposed to science, and prose to metre. The proper and immediate object of science is the acquirement and communication of truth; the proper and immediate object of poetry, is the communication of immediate pleasure. Lord Jeffrey's definition would clearly include burlesque composition; but the excitement of the ridiculous is altogether of a different nature from that produced by poetry in the modern sense of the word, which is necessarily elevating, imaginative, or tender. Poetry communicates to the reader that pleasurable emotion, that peculiar state and degree of excitement, which arises in the poet himself in the act of composition. The end of poetry then appears to be, to produce intellectual pleasure by exciting emotions either of the elevated or pathetic order. Poetry is essentially a creative art, its operation is *making* not transcribing. *Imitation* it is, as Aristotle has defined it; not because it copies, but because it has its model in nature, and can never depart far from it without losing its character. The pleasure arising from poetry Lord Jeffrey analyses into three parts: that which we receive from the excitement of passion or emotion; that which is derived from the play of imagination, or the easy exercise of reason; and that which de-

pends on the character and qualities of the diction.

POISON, *n.* (poiz'n.) [Fr. *poison*; Arm. *empoesoun*, *pouison*. Qu. its alliance to L. *pus*.] 1. Any agent capable of producing a morbid, noxious, or dangerous effect upon any thing endowed with life. All medicines possessing sufficient activity to be of much value, are always poisons in inordinate or excessive quantities; and every thing poisonous is capable of proving medicinal in suitably reduced quantities. The ancient Greeks employed the same word, both for a medicine and a poison. There are as many different modes in which poisons operate as there are different and distinct medicinal powers of any material activity. According to the popular notion, those articles only are poisonous, which are capable of producing morbid, noxious, or dangerous effects, in comparatively small quanti-

ties; but there is no just foundation for such a distinction. Poisons are divided, with respect to the kingdom to which they belong, into animal, vegetable, mineral, and halituous or aërial: with respect to their effects they have been divided into four classes, namely, *irritant, narcotic, narcotico-acrid*, and *septic*, or putrifiant. The most active poisons, in small doses frequently form most valuable medicines. There are certain poisons, however, which are lethal in the smallest quantity. Some substances are innocent when taken into the stomach, but are deleterious when taken into the lungs, or applied to the abraded surface of the skin; several substances act as poisons when applied either externally or internally, as arsenic.—*Poison fangs*, the superior maxillary teeth of certain species of serpents, as the viper and naia. These teeth, besides the cavity for the pulp, appear to be perforated by a second

Poison Fangs of Serpent.

longitudinal canal, which is open at both ends, and receives at that end next the base of the fang the termination of the duct of the poison-gland, which secretes an acrid or venomous liquor. The fang ordinarily lies recumbent, but when the serpent designs to bite, it is erected and the poison-gland is at the same time compressed, and emptied of its secretion, which is injected through the hollow fang into the wound.—2. Any thing infectious or malignant; as, the *poison* of pestilential diseases.—3. That which taints or destroys moral purity or health; as, the *poison* of evil example; the *poison* of sin.

POIS'ON, *v. t.* To infect with any thing fatal to life; as, to *poison* an arrow.—2. To attack, injure, or kill by poison.

The north polar circle is called the *arctic circle*, and the south polar circle the *antarctic circle*. The distance of each from its own pole is equal to the obliquity of the ecliptic, and the spaces within the two circles are called the *frigid zones*.—2. Proceeding from one of the regions near the poles; as, *polar* winds.—3. Pertaining to the magnetic pole, or to the point to which the magnetic needle is directed.

PO'LARCHY, *n.* [Gr. πολυς and αρχη.] Government by a number of persons.

POLAR'ISCOPE, *n.* An optical instrument for experimenting on the polarization of light. The most beautiful and brilliant colours are brought to the eye by this apparatus, and also means afforded for viewing, under great advantages, the delicate structure of many microscopic objects. The important details of the instrument are the polarizing and analysing plates or prisms, and these are formed either of natural crystalline structures, or of a series of reflecting surfaces artificially joined together.

POLAR'ITY, *n.* That quality of a body in virtue of which peculiar properties reside in certain points; usually, as in electrified or magnetized bodies, properties of attraction or repulsion, or the power of taking a certain direction. Thus we speak of the polarity of the magnet or magnetic needle, whose *pole* is not always that of the earth, but a point somewhat easterly or westerly; and the deviation of the needle from a north and south line is called its variation. A mineral is said to possess *polarity*, when it attracts one pole of a magnetic needle and repels the other. The particles of light are said to be endowed with *polarity*; which merely signifies that the opposite sides of a particle have different physical properties. [*See* Polarization.]

POLARIZA'TION, *n.* The act of giving polarity to a body.—*Polarization of light*, a change produced upon light by the action of certain media, by which it exhibits the appearance of having *polarity*, or poles possessing different properties. This property of light was first discovered by Huygens in his investigation of the cause of double refraction, as seen in the Iceland crystal. The attention of opticians was more particularly directed toward it by the discoveries of Malus, 1810, and since that time the subject has been greatly extended by Brewster, Biot, Fresnel, Young, Sir J. Herschel, and others. The polarization of light may be effected in various ways, but chiefly in the following:—1. By reflection at a proper angle from the surfaces of transparent media, as glass, water, &c. 2. By transmission through crystals possessing the property of double refraction. 3. By transmission through a sufficient number of transparent uncrystallized plates

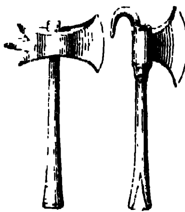
placed at proper angles. 4. By transmission through a number of other bodies imperfectly crystallized, as agate, mother of pearl, &c. The knowledge of this singular property of light has afforded an explanation of several very intricate phenomena in optics.

PO'LARIZE, *v. t.* To communicate polarity to.

PO'LARIZED, *pp.* Having polarity communicated to.

PO'LARIZING, *ppr.* Giving polarity to.

PO'LARY, *a.* [*See* POLAR.] Tending to a pole; having a direction to a pole.



POLE, *n.* [Sax. *pol, pal;* G. *pfahl;* W. *pawl;* L. *palus. See* PALE.] 1. A long round pale or stake; a staff; a tall piece of timber erected. Thus seamen use *poles* for setting or driving boats in shallow water; the stems of small trees are used for hoops and called *hoop-poles;* the stems of small, but tall straight trees, are used as *poles* for supporting the scaffolding in building.—2. A rod; a perch; a measure of length containing 16½ feet, or 5½ yards; it is the same as *rod.* Sometimes the term is used as a superficial measure; a square pole denoting 5½ × 5½ yards, or 30¼ square yards — 3. An instrument for measuring.— 4. A long rod, intended for a sign to many barbers' or hair-dressers' shops in Britain. It is usually painted red, with a white band running spirally round it; the colour, it is said, being imitative of blood, and the band a fillet used to tie the arm in bleeding: all indicative, it is asserted, of other times, when the calling of barber-surgeons supplied the place of the general practitioner in surgery.—5. A rod set up in a hop-garden, more commonly called a *hop-pole,* to support that slender-stemmed climbing plant.—*Bare poles,* a ship is under *bare poles* when her sails are all furled.

POLE, *n.* [Fr. *pole;* G. Dan. and Sw. *pol;* L. *polus;* Gr. πολος, from πολεω, to turn.] 1. In *astron*, one of the extremities of the axis of the world, the fixed point about which the stars appear to revolve. These two extremities, or fixed points, are called the *poles* of the world, or the *celestial poles;* the northern one is called the *arctic pole,* and the southern the *antarctic pole.*—2. In *spherics,* a point on the surface of a sphere equally distant from every part of the circumference of a great circle of the sphere; or it is a point 90° distant from the plane of a circle, and in a line passing perpendicularly through the centre, called the axis. Thus the zenith and nadir are the *poles* of the horizon.—3. In *geography,* the extremity of the earth's axis, or one of the points on the surface of our globe through which the axis passes. The northern one is called the *North Pole,* and the southern the *South Pole.* Each of these poles is 90° distant from every part of the equator.—4. [*See* STATISTICS.]—*Political economy,* the science

of the laws which regulate the production, distribution, and consumption of the products, necessary, useful, or agreeable to man, which it requires some portion of voluntary labour to produce, procure, or preserve. It must be observed, however, that the limits of this department of knowledge are not yet accurately defined; hence much discussion has arisen among different writers as to its extent, object, and the various subjects to be comprehended under it. It is, in general, said of political economy, that its object is to ascertain the circumstances most favourable for the production of wealth, and the laws which determine its distribution, among the different ranks and orders into which society is divided; and this definition seems quite unexceptionable, provided it be clearly understood, that by *wealth*, in this science, is meant only those articles or products which require some portion of human industry for their production, acquisition, or preservation, and which, consequently, possess exchangeable value. The principal topics discussed by political economists are:—1. The definition of wealth; 2. of productive and unproductive labour; 3. on the nature and measures of value; 4. on the rent of land; 5. the wages of labour; 6. the profits of capital; 7. the results of machinery; 8. the circulating medium, or currency, 9. the nature and conditions of commerce, or exchange of commodities. Continental writers on political economy not only treat of the principles which govern the production and accumulation of wealth, and its distribution and consumption, but also introduce into their systems inquiries into the principles according to which the governments of states may be organized, so as to promote in the best manner the well-being of those subjected to their authority; but this last subject belongs properly to general politics.

In other words, it is the theory and practice of obtaining the ends of civil society as perfectly as possible. The subjects which political science comprises have been arranged under the following heads:—1. Natural law; 2. abstract politics, that is, the object of a state, and the relations between it and individual citizens; 3. political economy; 4. the science of police, or municipal regulation; 5. practical politics, or the conduct of the immediate public affairs of a state; 6. history of politics; 7. history of the European system of states, being the only system in which the modern art of politics has received a practical development; 8. statistics; 9. positive law relating to state affairs, commonly called constitutional law; 10. practical law of nations; 11. diplomacy; 12. the technical science of politics, an acquaintance with the forms and style of public business in different countries. ficial bitter principle of aloes. It forms a yellow or brown powder, of a bitter astringent taste, easily soluble in hot water. All similar polygons are to one another as the squares of their homologous sides. If the sides, and, consequently, the angles, are all equal, the polygon is said to be regular; otherwise, it is irregular. Every regular polygon can be circumscribed by a circle, or have a circle inscribed in it. *Polygon*, in *fort.*, is either *exterior* or *interior*. The former is the figure formed by lines connecting the angles of the bastions with one another all round the work; the latter, by lines connecting the centres of the bastions all round. *Polygon of forces*, in *mech.*, the name given to a theorem which is as follows:—If any number of forces act on a point, and a polygon be taken, one of the sides of which is formed by the line representing one of the forces, and the following sides in succession by lines representing the other forces in magnitude, and parallel to their directions, then the line which completes the polygon will represent the resultant of all the forces.

[*See* FIGURATE NUMBERS.] These numbers are called in general *polygonal* numbers, from possessing this property, that the same number of points may be arranged in the form of that polygonal figure to which it belongs. For example, the pentagonal numbers 5, 12, 22, 35, 51, &c., may be severally arranged in a pentagonal form.

In *zool.*, a class of invertebrate radiated animals, one of the largest and most remarkable of the animal kingdom. The animals which it comprehends are gelatinous, with an elongated contractile body, usually of a cylindrical or conical form, commonly fixed by one extremity, and with the mouth situated at the opposite end, and surrounded by more or less numerous arms or tentacles, which are used to capture the necessary prey, while the opposite end serves the purpose of a sucker to fix the creature in its site, or being prolonged like a thread down the hollow sheath, to connect it with its fellow polypes of the same polypier, which by this means become compound animals, the whole of whose parts are animated by one common principle of life and growth. The polype has no proper organs of sense, no limbs appropriate to locomotion, no circulating vessels, no nerves, no lungs nor gills, no chylopoietic viscera, no intestines, and even no generative organs. The individuals of the species of the genus Hydra are capable of being multiplied in a very singular way; for, if one is minced into many pieces, each piece continues alive and grows into a perfect animal, capable of being again divided in the same manner. Lamarck arranges the polypi under five orders, viz. 1. *Polypi natantes*, including those polypi provided with tentacula united in a common fleshy mass, placed on an axis, free, and floating in the water. 2. *Polypi tubiferi*, tentaculated polypi united in a common fleshy body, without any solid axis, and covered with tubiform cylinders. 3. *Polypi vaginati*, polypi with tentacula, always fixed in an inorganic covering, and forming in general compound animals. 4. *Polypi denudati*, tentaculated polypi, not forming a common envelope, fixed either constantly or spontaneously. 5. *Polypi ciliati*, polypi without any tentacula, but instead of them, vibratile ciliæ, at or near the mouth. The Netherlands, and some parts of Italy, containing a hundred and fifty inhabitants to a square mile, are deemed *populous*.

POP'ULOUSLY, *adv.* With many inhabitants in proportion to the extent of country.

Our *purslain* is doubtless from the Latin *portulaca*, as Pliny writes it, or *porculata*, as others write it.]—1. The finest species of earthen ware, originally manufactured in China and Japan, but now made in several European countries. All earthen wares which are white and semi-transparent, are called porcelains, but they differ much in their fineness and beauty. The porcelain of China is said to be made of two species of earth, the petuntse, which is fusible, and the kaolin, which is not fusible, or not with the degree of heat which fuses the petuntse, and that in porcelain the substances are only semi-vitrified, or one substance only is vitrified, the other not. Hence it is concluded that porcelain is an intermediate substance between earth and glass. Hence the second degree of fusibility, of which *emollescence* is the first, is called by Kirwan the *porcelain state*. The manufacture of British porcelain has been brought to a state of great perfection, owing chiefly to the genius and enterprise of Wedgwood. This manufacture is principally carried on at the potteries in Staffordshire, and at Worcester, Derby, Colebrook Dale, and other places.—2. The plant called purslain,—*which see.*

in some of the older churches are of two stories, having an upper apartment, to which the name parvise is sometimes applied.—2. By way of distinction, *the porch* was a public portico in Athens, where Zeno, the philosopher, taught his disciples. It was called στοά, the painted porch, from the pictures of Polygnotus and other eminent painters, with which it was adorned. Hence, *the Porch* is equivalent to the *school of the Stoics*.

The body is covered with prickles which are very sharp, and some of them nine or ten inches long; these the animal can erect at pleasure. PORER, *n.* One who pores or studies diligently.

PORES, *n.* In *nat. philosophy*, the small interstices between the particles or molecules of matter which compose bodies. There are many considerations which prove that all bodies, even the densest, are porous, or are composed of molecules not in absolute contact, but separated from each other by intervals, which, though so small as to be inappreciable by the senses, have nevertheless a magnitude considerable in respect of the molecules themselves. It has been inferred that gold has more pores than solid parts; whence water, or any substance of the same specific gravity, must have many times more pores than solid parts. It has been computed from microscopic observations, that the skin of a middle-sized person contains no fewer than 2,304,000 pores.

Euclid gave this name to propositions involved in others which he was investigating, and obtained without a direct view to their discovery. These he called *acquisitions*, but such propositions are now called *corollaries*. A porism is defined, "a proposition affirming the possibility of finding such conditions as will render a certain problem indeterminate or capable of innumerable solutions." It is not a theorem, nor a problem, or rather it includes both. It asserts that a certain problem may become indeterminate, and so far it partakes of the nature of a theorem, and in seeking to discover the conditions by which this may be effected, it partakes of the nature of a problem.

PORIS'TIC, } *a.* Pertaining to a

POROS'ITY, *n.* [from *porous*.] The quality or state of having pores or interstices.—2. In *nat. philosophy*, a property of matter, in consequence of which its particles are not in absolute contact, but separated by intervals or pores. The quantity of matter in a body is inversely as its porosity; whence the ratio of the porosity of one body to another, may be determined from their relative weight.

It is of a red, or rather of a purple and white colour, more or less variegated, its purple being of all gradations, from violet to a claret colour. Egypt and the East furnish very plentiful strata of this material. It also abounds in Minorca, where it is of a red lead colour, variegated with black, white, and green. Pale and red porphyry, variegated with black, white, and green, is found in separate nodules in Germany, England, and Ireland. The art of cutting porphyry as practised by the ancients appears to be now quite lost.—2. In *geol.*, any unstratified or igneous rock in which detached crystals of felspar or some other mineral are diffused through a base of other mineral composition. Porphyry and basalt often cover the primary mountains in the Andes; resembling immense castles lifted into the sky.

The primary sense is to set or fix, from thrusting or pressing, L. *posui*, Fr. *poser;* hence the sense of collecting into a lump or fixed mass, Ch. and Syr. חבץ, *chabatz*, to press, compress, collect, coagulate.] 1. To puzzle, [a word of the same origin;] to set; to put to a stand or stop; to gravel.

A rule in arithmetic, called also the rule of supposition or *rule of false.* It consists in assuming a number, and performing upon it the operation described in the question, and then comparing the result with that given in the question, in order to discover the error in the assumption. Writers on arithmetic divide the rule into two parts, *single position* and *double position;* the former comprehending those questions in which the results are proportional to the suppositions, and where, consequently, only one assumption is required; the latter those in which the results are not proportional to the suppositions, and where two suppositions are necessary in order to deduce the true answer. Questions of this sort, however, are generally more easily performed by means of algebraic equations. Position is also called the *rule of trial* and *error*, and is sometimes employed with good effect in approximating to the roots of numerical equations.—8. In *painting*, the placing of the model in the manner best calculated for the end in view by the artist.—*Centre of position*, in *bodies*, the same as the centre of gravity, and centre of inertia; but when a body is viewed as composed of physical points, and the centre of gravity is considered in relation to their positions, geometers designate that point the *centre of position.*—*Position*, in *astr.*, relates to the sphere. The position of the sphere is either *right*, *parallel*, or *oblique.* [*See* SPHERE.] *Circles of position*, six circles, passing through the common intersections of the horizon and meridian and through any degree of the ecliptic or the centre of any star, or other point in the heavens, used for finding out the position or situation of any star. Absolute; express; not admitting any condition or discretion. The commands of the admiral are *positive.*—3. Absolute; real; existing in fact; opposed to *negative*, as *positive* good, which exists by itself, whereas *negative* good is merely the absence of evil; or opposed to *relative* or *arbitrary*, as beauty is not a *positive* thing, but depends on the different tastes of people.—4. Direct; express; opposed to *circumstantial;* as, *positive* proof.—5. Confident; fully assured; *applied to persons.* The witness is very *positive* that he is correct in his testimony.—6. Dogmatic; over-confident in opinion or assertion.

> Some *positive* persisting fops we know,
> That, if once wrong, will needs be always so. *Pope.*

7. Settled by arbitrary appointment; opposed to *natural* or *inbred.*

> In laws, that which is natural, bindeth universally; that which is *positive*, not so. *Hooker.*

> Although no laws but *positive* are mutable, yet all are not mutable which are *positive.* *Ibid.*

8. Having power to act directly; as, a *positive* voice in legislation.—*Positive degree*, in *gram.*, is the state of an adjective which denotes simple or absolute quality, without comparison or relation to increase or diminution; as, *wise*, *noble.*—*Positive electricity*, according to Dr. Franklin, consists in a superabundance of the fluid in a substance. Others suppose it to consist in a tendency of the fluid outward. It is not certain in what consists the difference between *positive* and *negative* electricity. [*See* ELECTRICITY.] *Positive* electricity being produced by rubbing glass, is called the *vitreous;* *negative* electricity, produced by rubbing amber or resin, is called the *resinous.*—*Positive and negative poles of a voltaic pile or battery.* [*See* POLE.] —*Positive quantity*, in *alge.*, an affirmative or additive quantity, which character is indicated by the sign + (plus), prefixed to the quantity, called in consequence the *positive sign.* The term is used in contradistinction to *negative.* [*See* NEGATIVE.]

it.—3. Certainly; indubitably. This is *positively* your handwriting.—4. Directly; explicitly; expressly. The witness testified *positively* to the fact.—5. Peremptorily; in strong terms.

The divine law *positively* requires humility, and meekness. *Sprat.*

6. With full confidence or assurance. I cannot speak *positively* in regard to the fact.—*Positively* electrified, in *the science of electricity*. A body is said to be *positively* electrified or charged with electric matter, when it contains a superabundance of the fluid, and *negatively* electrified or charged, when some part of the fluid which it naturally contains, has been taken from it. According to other theorists, when the electric fluid is directed outward from a body, the substance is electrified *positively*; but when it is entering or has a tendency to enter another substance, the body is supposed to be *negatively* electrified. The two species of electricity attract each other, and each repels its own kind.

POS'ITIVENESS, *n.* Actualness; reality of existence; not mere negation.

The *positiveness* of sins of commission lies both in the habitude of the will and in the executed act too; the *positiveness* of sins of omission is in the habitude of the will only. *Norris.*

It is said to include all knights and other men above the age of fifteen, able to travel within the county. The word *comitatus* is often omitted, and *posse* alone is used in the same sense. Justices of the peace may raise the posse in order to remove a force in making entry into or detaining lands.—2. In *low lan.*, a number or crowd of people; a rabble.

POSS, *v. t.* To dash in water. [*Local.*]

POSS, *n.* A waterfall [*Local.*]

POSSESS', *v. t.* [L. *possessus*, *possideo*, a compound of *po*, a Russian preposition, perhaps *by*, and *sedeo*, to sit; to *sit in* or *on*. We have this word from the Latin, but the same compound is in our mother tongue, Sax. *besittan*, to possess; *be*, *by*, and *sittan*, to sit; *gesittan*, *besettan*, *gesettan*, are also used; G. *besitzen*; Fr. *posseder*.] 1. A man may *possess* the farm which he cultivates, or he may *possess* an estate in a foreign country, not in his own occupation. He may *possess* many farms which are occupied by tenants. In this as in other cases, the original sense of the word is enlarged, the holding or tenure being applied to the *title* or *right*, as well as to the thing itself.—2. To hold; to occupy without title or ownership.

In *English law*, a personal chattel is held by possession, a real estate by title. In *Scots law*, the title to heritable property must be instructed *scripto*, or drawn up in writing, and regularly by charter and sasine, but the *possession* or occupancy of movables creates property. *Natural possession* is where the proprietor himself is actually in possession. *Civil possession* is possession not by the owner, but by another in his name or for his behoof. In *bailment*, the bailee who receives goods to convey, or to keep for a time, has the *possession* of the goods, and a temporary right over them, but not the property. *Property in possession* includes both the right and the occupation. It is prudent to reduce contracts to writing, and to render them so explicit as to preclude the *possibility* of mistake or controversy.

POS'SIBLE, *a.* [Fr.; It. *possibile*; from L. *possibilis*, from *posse*. *See*

POWER.] That may be or exist; that may be now, or may happen or come to pass; that may be done; not contrary to the nature of things. It is *possible* that the Greeks and Turks may now be engaged in battle. It is *possible* the peace of Europe may continue a century. It is not physically *possible* that a stream should ascend a mountain, but it is *possible* that the Supreme Being may suspend a law of nature, that is, his usual course of proceeding. It is not *possible* that 2 and 3 should be 7, or that the same action should be morally right and morally wrong. This word, when pronounced with a certain emphasis, implies improbability. In the modern law of nations, the right of *postliminy* is that by virtue of which, persons and things taken by an enemy in war, are restored to their former state, when coming again under the power of the nation to which they belonged. The sovereign of a country is bound to protect the person and the property of his subjects; and a subject who has suffered the loss of his property by the violence of war, on being restored to his country, can claim to be re-established in all his rights, and to recover his property. But this right does not extend, in all cases, to personal effects or movables, on account of the difficulty of ascertaining their identity.

In *geom.,* something to be assumed or taken for granted; a demand or petition, or a supposition so easy and self-evident that it needs no explanation or illustration, differing from an axiom only in the manner in which it is put, viz., as a request instead of an assertion. Euclid has constructed his *elements* on the three following postulates:—1. Let it be granted that a straight line may be drawn from any one point to any other point. 2. That

a terminated straight line may be produced to any length in a straight line. 3. That a circle may be described from any centre, at any distance from that centre.—3. POT'ASH, *n.* [*pot* and *ashes*; G. *pottasche*; Fr *potasse.*] The popular name of vegetable fixed alkali in an impure state, procured from the ashes of plants by lixiviation and evaporation. The matter remaining after evaporation is refined in a crucible or furnace, and the extractive substance burnt off or dissipated. Refined potash is called *pearlash*, and is in that state an impure carbonate of potash. The plants which yield the greatest quantity of potash are wormwood and fumitory. The production of potash is carried on upon a large scale in Russia and America, where wood is abundant, and of little value. With the acids, potash forms a variety of useful salts. It is largely employed in the manufacture of flint glass and soap, the rectification of spirits, bleaching, making alum, scouring wool, &c. It is also extensively used in medicine. By the discoveries of Sir H. Davy, it appears that the essential part of potash is a metallic oxide; the metal is called *potassium*, and the alkali, in books of science, is called *potassa.*

POTAS'SA, *n.* The scientific name of pure fixed vegetable alkali or protoxide of potassium.

It is the lightest metallic substance known, its specific gravity being 0.865 at the temperature of 60°. At 32° it is hard and brittle, with a crystalline texture; at 50° it becomes malleable, and in lustre resembles polished silver; at 150° it is perfectly liquid. Potassium has the most powerful affinity for oxygen of all substances known; it takes it from every other compound, and hence is a most important agent in chemical analysis.

The tuberous part of the root of this plant, which is usually called *potato*, constitutes one of the cheapest and most nourishing species of vegetable food; it is the principal food of the poor in some countries, and has often contributed to prevent famine. It is supposed to have been introduced into the British dominions by Sir Walter Raleigh, in the 16th century; but it came slowly into use, and even yet is not much cultivated in some countries of Europe. There are a great many varieties of the potato, arising from soil, culture, and other circumstances; these differ in the time of ripening, in their form, size, colour, and quality; and in general every district has its peculiar or favourite varieties, the names being quite arbitrary or local. Some degenerate, and others improve, by removal to another district. New varieties may be readily procured by sowing the seeds, which, with care, will produce tubers the third year, and a full crop the fourth. The farina of the potato, properly granulated and dried, is sold in the shops as a substitute for tapioca, or arrow-root.

POW′ER, *n.* [Fr. *pouvoir;* Norm. *povare;* from the root of Sp. and Port. *poder;* or rather the same word varied in orthography. The Latin has *posse, possum, potes, potentia.* The primary sense of the verb is to strain, or exert force.] 1. In *a philosophical sense,* the faculty of doing or performing any thing; the faculty of moving or of producing a change in something; ability or strength. A man raises his hand by his own *power,* or by *power* moves another body. The exertion of *power* proceeds from the will; and in strictness, no being destitute of will, or intelligence, can exert *power.* Power in man is *active* or *speculative. Active power* is that which moves the body; *speculative power* is that by which we see, judge, remember, or in general, by which we *think.* Power may exist without exertion. We have *power* to speak when we are silent. Power has been distinguished also into *active* and *passive,* the power of *doing* or *moving,* and the power of *receiving* impressions or of *suffering.* In strictness, *passive* power is an absurdity in terms. To say that gold has a *power* to be melted, is improper language, yet for want of a more appropriate word, *power* is often used in a passive sense, and is considered as two-fold; viz. as able to *make* or able to *receive* any change.— 2. Force; animal strength; as, the *power* of the arm, exerted in lifting, throwing, or holding.—3. Force; strength; energy; as, the *power* of the mind, of the imagination, of the fancy. He has not *powers* of genius adequate to the work.—4. Faculty of the mind, as manifested by a particular mode of operation; as, the *power* of thinking, comparing, and judging; the reasoning *powers.*—5. Ability, natural or moral. We say, a man has the *power* of doing good; his property gives him the *power* of relieving the distressed; or, he has the *power* to persuade others to do good; or, it is not in his *power* to pay his debts. The moral *power* of man is also his *power* of judging or discerning in moral subjects.—6. In *mech.,* that which produces motion or force, or which may be applied to produce it; as one of the six simple machines, viz., the lever, wheel and axle, the pulley, the inclined plane, the wedge, and the screw. These are termed *mechanical powers,* as they may be applied to produce force or motion, or mechanical effect. [*See* MECHANICAL.] 7. In *machines,* the moving force applied to overcome some resistance, raise some weight, or produce the required effect. Thus the pressure of a weight, the elastic force of a spring, the muscular force of men and animals, wind, water, steam, are employed as powers in machinery. [*See* MACHINE.] Power may be exerted for the purpose of producing or preventing motion; in the former case it is called a *moving power* or *force,* and in the latter, a *sustaining power* or *force.*—8. Mechanical advantage or effect. Thus the power or mechanical advantage of the lever increases as the distance of the moving force (also termed the power) from the fulcrum increases, and diminishes as the distance of the weight or resistance from the same point increases. —9. Force or effect considered as resulting from the action of a machine. The great *power* of Bramah's press is of extensive use in compression. The *power* of the steam-engine is immense. 10. That quality in any natural body which produces a change or makes an impression on another body; as, the *power* of medicine; the *power* of heat; the *power* of sound.—11. Force; strength; momentum; as, the *power* of the wind, which propels a ship or overturns a building.—12. Influence; that which may move the mind; as, the power of arguments or of persuasion.—13. Command; the right of governing, or actual government; dominion; rule; sway; authority. A large portion of Asia is under the *power* of the Russian emperor. The *power* of

the British monarch is limited by law. The *powers* of government are legislative, executive, judicial, and ministerial.

> *Power* is no blessing in itself, but when it is employed to protect the innocent. *Swift.*

Under this sense may be comprehended civil, political, ecclesiastical, and military *power*.—14. A sovereign, whether emperor, king, or governing prince, or the legislature of a state; as the great *powers;* the smaller *powers*. In this sense, the state or nation governed seems to be included in the word *power*. Great Britain is a great naval *power*.—15. One invested with authority; a ruler; a civil magistrate; Rom. xiii.—16. Divinity; a celestial or invisible being or agent supposed to have dominion over some part of creation; as, celestial *powers;* the *powers* of darkness.—17. That which has physical power; an army; a navy; a host; a military force.

B. to be forewarned that he appear before us," &c. Whenever it is said that a person by any act incurs a *præmunire*, it is meant to express that he thereby incurs the penalty of being out of the king's protection; and his lands and tenements, goods and chattels, are forfeited to the king, and that his body shall remain in prison during the king's pleasure. This penalty attached in former times upon the offences of asserting the jurisdiction of the pope, and denying the king's supremacy. By later statutes, acts of a very miscellaneous nature have been rendered liable to the penalties of præmunire, as refusing to take the oaths of allegiance and supremacy.—2. It appears that *praise, price, prize,* are all from one root, the primary sense of which is to lift, to raise, or rather to strain. So from L. *tollo, extollo,* we have *extol.* Now in Dan. *roser,* Sw. *rosa,* signifies to praise; and it may be questioned whether this is *praise* without a prefix. The Latin *pretium,* W. *prid,* is probably from the same root, denoting that which is *taken* for a thing sold, or the *rising* or amount, as we use *high;* a *high* value or price; corn is *high.* In Pers. *afaraz,* is high, lofty; *afrazidan,* to extol. Qu. Fr. *prôner,* for *prosner.*] 1. To commend; to applaud; to express approbation of personal worth or actions.

PRECES'SION, *n.* [Fr. *precession*; from the L. *præcessus*, *præcedo*, to go

before.] 1. Literally, the act of going before.—2. In *astron.*, the *precession of the equinoxes* is a slow retrograde motion of the equinoctial points, viz., from east to west, or contrary to the order of the signs. The equinoctial points do not retain the same position in the heavens, but have a slow retrograde motion at the rate of about 50¼″ in a year, or about a degree in 71.642 years; the equator moving on the ecliptic while the ecliptic remains nearly coincident with the same fixed stars. This phenomenon is called the precession of the equinoxes, because it makes the equinoxes succeed each other in less time than they would otherwise do. In consequence of the precession of the equinoxes, the longitudes and right ascensions of the heavenly bodies are continually increasing, and owing to the motion of the equator, which occasions that precession, their declinations also are altered. The precession of the equinoxes was discovered by Hipparchus, a century and a half before the Christian era, though it is alleged that the astronomers of India had discovered it long before. At that time, the point of the autumnal equinox was about six degrees to the eastward of the star called *spica virginis*. In 1750, that is, about nineteen hundred years after, this point was observed to be about 26° 21′ westward of that star. Hence it appears that the equinoctial points will make an entire revolution in about 25,745 years.

PREPOSI''TION, *n.* (*s* as *z.*) [Fr. from L. *præpositio; præpono, præpositus; præ* and *pono*, to put.] In *gram.*, a word usually put before another to express some relation or quality, action or motion to or from the thing specified; as, medicines salutary *to* health; music agreeable *to* the ear; virtue is valued *for* its excellence; a man is riding *to* Oxford *from* London. Prepositions govern cases of nouns, and in English are sometimes placed *after* the word governed; as, *which person* do you speak *to?* for, *to which person* do you speak? This separation of the preposition from the governed word is sometimes allowable in colloquial use, but is generally inelegant. According to Horne Tooke, every preposition was originally a verb or a noun. The number of prepositions differs in different languages. In Greek there are eighteen; in Latin, about fifty; and in English about forty-seven.—*Inseparable prepositions*, certain particles never found singly, or uncompounded; as in English, *be-*, *for-*, *fore-*, *mis-*, &c., which occur in such words as *be-stir*, *for-sake*, *fore-see*, *mis-take*, &c.

To preoccupy the mind or heart so as to preclude other things; hence, to bias or prejudice. A mind *prepossessed* with opinions favourable to a person or cause, will not readily admit unfavourable opinions to take possession, nor yield to reasons that disturb the possessors. When a lady has *prepossessed* the heart or affections of a man, he does not readily listen to suggestions that tend to remove the prepossession. *Prepossess* is more frequently used in a good sense than *prejudice.*

PREPOSSESS'ED, *pp.* Preoccupied; inclined previously to favour or disfavour.

PREROG'ATIVE, *n.* [Fr. *id.*; L. *prærogativa*, precedence in voting; *præ*, before, and *rogo*, to ask or demand.] An exclusive or peculiar privilege. A *royal prerogative*, is that special pre-eminence which a king has over all other persons, and out of the course of the common law, in right of his regal dignity, and as being supreme magistrate intrusted with the execution of the laws. *Prerogatives* are said to be of two kinds, *direct* and *incidental*; the first, such as belong to the king essentially by virtue of his high political character, such as the inviolability of his person, the appointment to offices and places of trust, the command of the army, the power of making war and peace, his legislative power, &c.; and the latter, such exceptions as are made in his favour from the ordinary rules of law in private matters; as, with respect to debts, the power to levy first execution before other creditors, and of levying by the prerogative writ of extent; exemption from all customs, general and special, as to descent of lands in a case where any such custom would have the effect of preventing lands, held *jure coronæ*, from passing to the successor; the abstract dominion of all lands, and hereditaments by the fiction of universal occupancy, the dominion of seas, navigable rivers, &c. The right of governing created beings is the *prerogative* of the Creator. It is the *prerogative* of the house of peers in Great Britain, to decide legal questions in the last resort. It is the *prerogative* of the house of commons to determine the validity of all elections of their own members. It is the *prerogative* of a father to govern his children. The two *prerogative-courts*, are those of the archbishops of Canterbury and York.

PRESAGE, *v. t.* To forebode; to foreshow; to indicate by some present fact what is to follow or come to pass. A fog rising from a river in an autumnal morning *presages* a pleasant day. A physical phenomenon cannot be considered as *presaging* an event, unless it has some connection with it in cause. Hence the error of vulgar superstition, which *presages* good or evil from facts which can have no relation to the future event.—2. To foretell; to predict; to prophesy.

Wish'd freedom I *presage* you soon will find. *Dryden.*

It is usually caused by flattening of the cornea, and hence, convex spectacles are required.

PRES'BYTÆ, *n. plur.* [Gr. πρεσβυτης, an elderly person.] Persons whose eyes are too flat to refract the rays sufficiently, so that unless the object is at some distance, the rays coming from it will pass through the retina before their union; consequently, vision is confused. [*See* Presbyopia.]

PRES'BYTER, *n.* [Gr. πρεσβυτερος, from πρεσβυς, old, older.] 1. In *the primitive Christian church*, an elder; a person somewhat advanced in age, who had authority in the church, and whose duty was to feed the flock over which the Holy Spirit had made him overseer.—2. PRESBYTE'RIAN, } a presbytery, or to ecclesiastical government by presbyters.—2. Consisting of presbyters; as, *presbyterian* government. The government of the church of Scotland is *presbyterian*.

PRESBYTE'RIAN, *n.* One that maintains the validity of ordination and government by presbyters.—2. One that belongs to a church governed by presbyters. *Presbyterians* maintain that the government of the church appointed in the New Testament was by presbyteries; that is, by associations of presbyters or elders all possessed of equal powers, without any superiority among them, either in office or in order. They believe that the words presbyter and bishop, which occur in the New Testament, are synonymous and interchangeable terms; that all ministers of the gospel, being ambassadors of Christ, are inherently equal; and that the sole duty of deacons is to take charge of the poor and of ecclesiastical goods or property. The most noted presbyterian churches are those of Scotland. The doctrines of these churches are Calvinistic, the Westminster Confession of Faith being the standard which all ministers are required to subscribe. There are four ecclesiastical judicatories, viz., the kirk-session, composed of the minister of a single congregation and a number of elders; the presbytery [*see* Presbytery]; the synod, consisting of the ministers and elders of a certain number of presbyteries; and the general assembly, composed of representatives of the presbyteries, consisting of ministers and elders.

PRESBYTE'RIANISM, *n.* The doctrines, principles, and discipline or government of presbyterians.

PRES'BYTERY, *n.* A body of elders in the Christian church.

Neglect not the gift that is in thee, which was given thee by prophecy, with the laying on of the hands of the *presbytery*; 1 Tim. iv.

2. In *eccles. government*, a judicatory, consisting of the pastors of all the churches of any particular presbyterian denomination within a given district, along with their ruling (*i. e.* governing) elders; there being one ruling elder from each kirk-session, commissioned to represent the congregation in conjunction with the minister. The functions of the presbytery are to grant licences to preach the gospel, and to judge of the qualifications of such as apply for them; to ordain ministers to vacant charges; to judge in cases of reference for advice; and in complaints and appeals which come from the kirk-sessions within the bounds of the presbytery; and generally to superintend whatever relates to the spiritual interests of the several congregations under its charge, both in respect of doctrine and discipline. Appeals may

be taken from the presbytery to the provincial synod, and thence to the general assembly.—3. The presbyterian religion.—4. In *arch.*, the intermediate part between the choir and the lady-chapel in a cathedral or large church; it is frequently wanting, and in such cases this term is used for the choir and other parts of the church appropriated for the officiating priests.

PRESCRIP'TION, *n.* [L. *præscriptio*. See PRESCRIBE.] 1. The act of prescribing or directing by rules; or that which is prescribed; particularly, a medical direction of remedies for a disease and the manner of using them; a recipe.—*Prescriptions*, with us, are usually written in what is called Latin, a mistaken reading of which sometimes occasions hurtful, and even fatal results. In France, medical men must, by law, write them in French.—2. In *law*, a prescribing for title; the claim of title to a thing by virtue of immemorial use and enjoyment; or the right to a thing derived from such use, such as a right of way, or of common, or the like. All prescription is either personal, as when it is in a man and his ancestors, or it is in right of a particular estate. After uninterrupted enjoyment for thirty, and in many cases for twenty years, a *prima facie* title arises by prescription to the thing enjoyed, and unless such enjoyment have continued under some consent or agreement, the title becomes, in sixty years, absolute and indefeasible. The most known and frequent subjects of prescription are the following rights annexed to land, styled *incorporeal hereditaments*, viz., right of common or other profit out of land, and those rights without profit, which are called *easements*, viz., right of way, water-courses, pews, and lights, being conveniences possessed by one man to be enjoyed in the land of another. The time of prescription in most of the ordinary instances, to which it applies, is now regulated by 2nd and 3rd W. 4, c. 71. *Prescription* differs from *custom*, which is a local usage. The use and enjoyment of navigation and fishery in the sea, for any length of time, does not create a title by *prescription*. The common right of nations to the use and enjoyment of the sea is *imprescriptible;* it cannot be lost by a particular nation for want of use.—3. In *Scots law*, the title to lands acquired by uninterrupted possession for the time which the law declares to be sufficient, or forty years. This is *positive* prescription. *Negative* prescription is the loss or omission of a right by neglecting to use it during the time limited by law. This term is also used for *limitation*, in the recovery of money due by bond, &c. Obligations are lost by *prescription*, or neglect of prosecution for the time designated by law. Besides the *positive* and *negative* prescriptions, there are what are termed *lesser* or *shorter* prescriptions, the object of which is, generally speaking, to protect parties against the consequences of negligence in the preservation of vouchers; and after the expiration of the period of the prescription to change the *onus probandi*, and to restrict the mode of proof. The lesser prescriptions are the *biennial, decennial, septennial, sexennial, quinquennial*, and *prescription of crimes*.

PRESCRIPT'IVE, *a.* Consisting in or acquired by immemorial use and enjoyment; as, a *prescriptive* right or title. 2. Pleading the continuance and authority of custom.

to belief. Presumption in law is of three sorts, *violent* or *strong*, *probable* and *light*.

Next to positive proof, circumstantial evidence or the doctrine of *presumptions* must take place; for when the fact cannot be demonstratively evinced, that which comes nearest to the proof of the fact is the proof of such circumstances as either necessarily or usually attend such facts. These are called *presumptions*. Violent *presumption* is many times equal to full proof. *Blackstone.*

Presumptions are also divided into, 1. Legal presumptions made by the law itself, or presumptions of mere law. 2. Legal presumptions to be made by a jury, or presumptions of law and fact. 3. Mere natural presumptions, or presumptions of mere fact. In *Scots law*, presumptions are divided into, 1. Presumptions *juris et de jure*. 2. Presumptions *juris* only. 3. Presumptions *hominis vel judicis*. The presumption *juris et de jure*, is that where law or custom assumes the fact to be so on a presumption which cannot be traversed by contrary evidence. The presumption *juris* is one established in law until the contrary be proved. The presumption *hominis vel judicis*, is that conviction which arises from the circumstances of a case, and is sometimes of sufficient force to overcome the presumption *juris*.—2. Strong probability; as in the common phrase, the *presumption* is that an event has taken place, or will take place.—3. This term, however, is now almost disused, as it is found that each bitter febrifuge, narcotic, or other substance, generally contains a principle peculiar to itself upon which its powers depend, and that there is no such common or universal principle as was formerly supposed. For the same reason the term *principle of inflammability*, or *phlogiston*, is rejected, as applied in common with *nervous principle*, &c., to an imaginary existence.—*Principles*, in *the fine arts*, those general and fundamental truths, from which the rules and maxims of art are deduced. The most important branch of printing is what is called *letter-press* printing, or the method of taking impressions from *letters* and other *characters* cast or cut in relief upon separate pieces of metal, and therefore capable of indefinite combination. The impressions are taken either by superficial or surface pressure, as in the hand printing press, [*see* FRISKET, for figure of *Columbian press*,] or by lineal, or cylindrical pressure, as in the printing machine; or by the action of a roller, as in the copperplate press, or roller press. The pigments or inks, of whatever colour, are always laid upon the surface of the types. Wood-cuts, and other engravings in relief, are also printed in this manner. In copper and steel plate printing, the characters are engraven in intaglio, and the inks contained within the lines of the engravings, and not upon the surface of the plate. Cotton or calico printing is from surfaces engraven either in relief or in intaglio. [*See* LITHOGRAPHY,

STEREOTYPE.] The art of *letter-press* printing was invented by Gutenberg at Mentz. About the year 1440 he invented movable wooden types, and about the year 1450-53 Peter Schöffer invented cast metallic types. Printing was first introduced into England by William Caxton about 1474.

PRINTING-MACHINE, *n.* An iron mechanical construction for taking letter-press impressions, of which a much greater number are yielded in a given time by it than the hand-press of printers.—*Printing-machines* include a self-inking apparatus; and they are moved either by hand or steam power. In most cases the impression taken from the "forms" worked by them is effected by a cylinder, or several cylinders; in others, by a flat pression, like the press platen. The first self-acting printing machine dates from a patent of W. Nicholson, in 1790; the next practical attempt was made in 1804, at the expense of the late Mr. Walter, of the *Times*, by T. Martyn. But the first working machine was constructed ten years afterwards by two ingenious Germans, Messrs. Koenig and Bauer. On this machine the *Times* of Nov. 29, 1814, was printed by steam, at the rate of 1,100 impressions per hour. Since then, successive improvements have raised the amount on that journal to 6,000 per hour, and that number may yet be doubled. The *printing machine* is now in use, almost everywhere, for nearly all kinds of printing, whenever speed and economy are desirable.

The theory of probabilities, a very extensive and important application of analysis, has for its object the determination of the number of ways in which a future or uncertain event may happen or fail in order that we may be enabled to judge whether the chances of its happening or failing are the greater, and in what proportion. In this sense also process is either civil or criminal. Civil process was formerly, and until lately practically divided into *original*, *mesne* (*intermediate*), and *final*. *Original process*, more commonly known as original writs, was the means employed for commencing a suit, beginning with notice, writ of attachment, &c. *Mesne*, or intermediate process, was, properly speaking, such process as issued pending the writ, on some collateral or interlocutory matter; as, to summon juries or witnesses. But in popular language it was taken to signify the whole process from the commencement of the suit before the final process which ended it. The term *mesne process* is now commonly applied to the writ of summons, which is the instrument now in use for commencing personal actions, the use of original writs in personal actions having been abolished. *Final process*, is the writ of execution used to carry the judgment into effect.
